the University of Auckland New Zealand in the early 1990s and has been developed by an international team since mid 1997. Historically econometricians have favored other computing environments some of which have fallen by the wayside and also a variety of packages with canned routines. We believe that R has great potential in econometrics both for research and for teaching. There are at least three reasons for this: 1. R is mostly platform independent and runs on Microsoft Windows, the Mac family of operating systems and various flavors of Unix, Linux and also on some more exotic platforms. 2. R is free software that can be downloaded and installed at no cost from a family of mirror sites around the globe: the Comprehensive R Archive Network (CRAN), hence students can easily install it on their own machines. 3. R is open source software so that the full source code is available and can be inspected to understand what it really does, learn from it and modify and extend it. We also like to think that platform independence and the open source philosophy make R an ideal environment for reproducible econometric research.
