Mooney, 2012-12-06 No other disjunct pieces of land present such striking similarities as the widely separated regions with a Mediterranean type of climate that is the territories fringing the Mediterranean Sea, California, Central Chile, and the southernmost strips of South Africa and Australia. Similarities are not confined to climatic trends but are also reflected in the physiognomy of the vegetation, in land use patterns, and frequently in the general appearance of the landscape. The very close similarities in agricultural practices and sometimes also in rural settlements are dependent on the climatic and edaphic analogies as well as on a certain commonality in cultural history. This is certainly true for the Mediterranean Sea.
