Aphid Ecology:

Aphid Ecology An optimization approach A.F.G. Dixon, 2012-12-06 Aphids are the most important of the sap sucking insects they are also major pests of agriculture horticulture and forestry This book covers the evolution of aphids and their development in relation to specific plants Optimization is used to explain how modes of feeding and reproduction have affected their size and population structure and led to a very close and specific association with their host plants Increasing knowledge of aphids has revealed that they are ideal organisms to use when studying many topical ecological issues They are particularly important for testing predictions of life history theory as their clonal structure makes it possible to test the response of a genotype to a wide range of conditions Aphid Ecology has been thoroughly revised and expanded since the first highly successful edition was published in 1985 This book is aimed at specialists post graduates and advanced undergraduates working in the fields of ecology and entomology Aphid Ecology Anthony Frederick George

Dixon, 1985-01-01 **Aphid Ecology an Optimization Approach** A. F. G. Dixon, 1997-11-30 **Biology and Ecology of Aphids** Andreas Vilcinskas, 2016-02-22 Most people know of aphids as garden pests infesting the soft green tissues of plants in vast numbers and killing them by sucking out the sap Indeed among the 4000 or so known species of aphids about 250 are pests and in temperate regions several are economically important agricultural pests that damage crops directly during feeding or act as v *Aphid Ecology* A.F.G. Dixon, 1996-08 This volume examines the ecology of aphids some of which are serious pests of agricultural crops and forest trees In this revised edition there are chapters on redistribution in space biological control forecasting of pest aphid outbreaks and pollution and global warming **Aphid Ecology** Anthony Frederick George Dixon, 1985 Host selection Size in aphids Polymorphism Cyclical parthenogenesis Life history patterns Dispersal Population dynamics Community structure and species diversity Epilogue *Functional Ecology of Woodlands and Forests* J.R. Packham, D.J. Harding, 1992-05-31 Functional Ecology of Woodlands is firmly based on the factors which govern the composition of woodland communities but goes on to explore the dynamics of interactions between various ecosystem components This is an authoritative text on the functioning of forest ecosystems which will also assist readers to reach informed decisions about issues such as the greenhouse effect acid precipitation the greening of cities and agroforestry

Aphids as Crop Pests, 2nd Edition Helmut F van Emden, Richard Harrington, 2017-08-23 Aphids are among the major global pest groups causing serious economic damage to many food and commodity crops in most parts of the world This revision and update of the well received first edition published ten years ago reflects the expansion of research in genomics endosymbionts and semiochemicals as well as the shift from control of aphids with insecticides to a more integrated approach imposed by increasing resistance in the aphids and government restrictions on pesticides The book remains a comprehensive and up to date reference work on the biology of aphids the various methods of controlling them and the progress of integrated pest management as illustrated by ten case histories *Long-Term Studies in Ecology* Gene E.

Likens, 2012-12-06 The Cary Conferences as we have envisaged them are different from most scientific meetings in that they provide a forum for major issues in ecology from a more philosophical point of view. It appears to many of us that ecologists have limited opportunities to come together in small groups to address in a more philosophical way some of the major questions and issues that matter very much to the future of humankind and to us as ecologists. Moreover, we hope that the setting of the Mary Flagler Cary Arboretum promotes strong interaction and discussion between Conference participants with a minimum of distraction. We are proud to make our facilities available for such meetings and we hope that over the years these Conferences might provide direction and leadership for the whole field of ecology. We have the broad goal of attempting to advance the field of ecology by bringing together leading ecologists and other scientists to address major issues. The first Cary Conference in 1985 considered the status and future of ecosystem science. This first Conference was rather loosely structured but was successful in stimulating discussion, ideas, and enthusiasm. Likens et al. 1987. The goals for this second Cary Conference in 1987 were 1 to identify the roles of long term studies in ecology 2 to identify the options for study of long term ecological phenomena 3

Dispersal Ecology British Ecological Society. Symposium, 2002-08 Dispersal has become central to many questions in theoretical and applied ecology in recent years. In this volume a team of leading ecologists aim to provide the advanced student and researcher with a comprehensive review of dispersal and its implications for modern ecology.
