

CLINICAL ISSUES

Psychiatry Update: American Psychiatric Association Annual Review, vol. 6, edited by Robert E. Hales, M.D., and Allen J. Frances, M.D. Washington, D.C., American Psychiatric Press, 1987, 825 pp., \$49.95; \$36.95(paper).

A hybrid of a textbook and a scientific journal, the *American Psychiatric Association Annual Review* now flourishes in its sixth season. And what a robust and hardy perennial this series has become—a veritable living litmus of the fertility and vitality of our field. This year, one in five APA members will purchase a copy of this *Update*, and they will be treated to a bouquet of timely clinical and basic science presentations.

The remarkable success and value of the *Update* series are rooted in its workable concept and the unparalleled accomplishment of its editors, now Robert Hales and Allen Frances, who yearly select five important topics and recruit section editors and authors to explore these topics in depth. The *Update* is tightly edited to avoid redundancy and is unified by the editorial instructions to be clinically relevant, to be data based, and to place special emphasis on the important new ideas in each area. Remarkably, the time from the selection of topics and section editors to the publication of the *Update* is approximately 18 months. This time frame rivals and often eclipses the time from submission to publication of articles in even the most efficient scientific journals and ensures the inclusion in the *Update* of new clinical approaches as well as fresh research data.

Volume 6 of the *American Psychiatric Association Annual Review* has adhered to and further refined the vital *Update* concept. Each of the 26 chapters is a valuable contribution and merits individual notation and praise, but this, manifestly, is beyond the structural constraints of a book review. Of necessity, therefore, I will stroll through this garden of delights to pluck a specimen or two from each section in an effort to reflect the vast appeal of the whole.

Considered in the section entitled *Bipolar Disorders*, edited by Frederick K. Goodwin and Kay Jamison, are differential diagnosis, natural course, and epidemiology; biological findings; sleep and biological rhythms; treatment; psychotherapeutic issues and suicide prevention; and treatment-resistant bipolar illness. Required reading for the practicing clinician is Goodwin and Peter P. Roy-Byrne's chapter on pharmacologic treatment (e.g., lithium doses, blood levels, clinical monitoring for side effects, and management of "breakthrough" manias and depression) and Post and Uhde's chapter on pharmacologic treatment of patients with lithium-resistant bipolar illness. Topical, comprehensive, and well presented are the data on use of valproic acid and other agents reported to be effective. Never was the term "update" more appropriately applied than in this section on bipolar illness.

Current and relevant information is presented in the section on *Neuroscience Techniques in Clinical Psychiatry*, edited by John M. Murihisa and Solomon H. Snyder. In-

cluded in this section are pharmacology, endocrinology, and psychoimmunology in clinical psychiatry as well as basic concepts and clinical implications of the neurobiology of sleep, CAT scanning, magnetic resonance imaging, and functional brain imaging (e.g., positron emission tomography, computerized EEG and evoked potential mapping, single photon emission computerized tomography, and regional cerebral blood flow). Such issues as the "two-disease theory of depression" (i.e., catecholamine and indoleamine) and the value of blood level measurements of antipsychotic medications are critically and lucidly reviewed. A welcome feature of this section is that, after divergent theoretical data are presented, the authors often take stands as to which approach or conclusion they feel most likely to be correct. The chapters on psychoendocrinology and psychoimmunology in clinical psychiatry, which include, for example, a discussion of the neuroendocrine and neurotransmitter regulation of immune function, are fascinating and have almost unfathomable implications for future discovery. The chapters on the neurobiology of sleep and imaging in psychiatry are written by authors who have made seminal contributions in these areas; in my opinion, these are among the best and most current available overviews of these topics.

The section entitled *Differential Therapeutics*, edited by John F. Clarkin and Samuel W. Perry, is organized according to five major decisions that the clinician must make in formulating a treatment plan: the setting for treatment (inpatient, outpatient, day hospital), the format of treatment (individual, group, family), strategies and techniques of treatment (exploratory, cognitive, behavioral), the frequency and duration of treatment, and the choice of medication. Perry has written two ground-breaking books on differential therapeutics (1, 2), one with Allen Frances (1). He and Clarkin define the goal of this section of the *Update* as providing a clear statement of what we know and what still remains to be learned about treatment selection. Carl Salzmann and Alan I. Green's chapter on psychopharmacology explores such important and elusive issues as delusional depression, lithium-resistant affective disorder, and the strategy for low-dose management of acute behavioral disruption and schizophrenia. The authors encourage the reader to avoid such treatment clichés as assuming that a 4-week course of at least 300 mg of imipramine (or the equivalent) constitutes an adequate therapeutic trial for most depressions; recent data suggest that an adequate trial would be 6 weeks of treatment at high-dose levels. An important clinical point that was not included here is the misuse of antipsychotics in the "treatment" of agitation and aggression related to chronic brain syndromes. β Blockers and anticonvulsants are safer and more effective choices in such cases. Perry's chapter is intriguing and iconoclastic. He challenges the data and reasoning behind the conventional frequency and duration of psychotherapy sessions. He discusses the value of consultation without further treatment and even the occasional recommendation of no treatment as a specific therapeutic intervention.
