M. Danskin, 2012-12-06 Max Min problems are two step allocation problems in which one side must make his move knowing that

the other side will then learn what the move is and optimally counter. They are fundamental in particular to military weapons selection problems involving large systems such as Minuteman or Polaris where the systems in the mix are so large that they cannot be concealed from an opponent. One must then expect the opponent to determine on an optimal mixture of in the case mentioned above anti Minuteman and anti submarine effort. The author's first introduction to a problem of Max Min type occurred at The RAND Corporation about 1951. One side allocates anti missile defenses to various cities. The other side observes this allocation and then allocates missiles to those cities. If $F(x, y)$ denotes the total residual value of the cities after the attack with x denoting the defender's strategy and y the attacker's, the problem is then to find $\max_x \min_y F(x, y)$.

Fractional Order Differentiation and Robust Control Design Jocelyn Sabatier, Patrick Lanusse, Pierre Melchior, Alain Oustaloup, 2015-05-06 This book provides an overview of the research done and results obtained during the last ten years in the fields of fractional systems control fractional PI and PID control robust and CRONE control and fractional path planning and path tracking. Coverage features theoretical results applications and exercises. The book will be useful for post graduate students who are looking to learn more on fractional systems and control. In addition it will also appeal to researchers from other fields interested in increasing their knowledge in this area.

Mathematical Morphology and Its Applications to Image and Signal Processing John Goutsias, Luc Vincent, Dan S. Bloomberg, 2006-04-11 Mathematical morphology is a powerful methodology for the processing and analysis of geometric structure in signals and images. This book contains the proceedings of the fifth International Symposium on Mathematical Morphology and its Applications to Image and Signal Processing held June 26-28 2000 at Xerox PARC Palo Alto California. It provides a broad sampling of the most recent theoretical and practical developments of mathematical morphology and its applications to image and signal processing. Areas covered include decomposition of structuring functions and morphological operators morphological discretization filtering connectivity and connected operators morphological shape analysis and interpolation texture analysis morphological segmentation morphological multiresolution techniques and scale spaces and morphological algorithms and applications. Audience: The subject matter of this volume will be of interest to electrical engineers computer scientists and mathematicians whose research work is focused on the theoretical and practical aspects of nonlinear signal and image processing. It will also be of interest to those working in computer vision applied mathematics and computer graphics.

Recent Advances in Optimization and its Applications in Engineering Moritz Diehl, Francois Glineur, Elias Jarlebring, Wim Michiels, 2010-09-21 Mathematical optimization encompasses both a rich and rapidly evolving body of fundamental theory and a variety of exciting applications in science and engineering. The present book contains a careful selection of articles on recent advances in optimization theory numerical methods and their applications in engineering. It features in particular new methods and applications in the fields of optimal control PDE constrained optimization nonlinear optimization and convex optimization. The authors of this volume took part in the 14th Belgian French German Conference on

Optimization BFG09 organized in Leuven Belgium on September 14-18 2009. The volume contains a selection of reviewed articles contributed by the conference speakers as well as three survey articles by plenary speakers and two papers authored by the winners of the best talk and best poster prizes awarded at BFG09. Researchers and graduate students in applied mathematics, computer science and many branches of engineering will find in this book an interesting and useful collection of recent ideas on the methods and applications of optimization.
