Semantics of Probabilistic Processes Yuxin Deng, 2015-02-06 This book discusses the semantic foundations of concurrent systems with nondeterministic and probabilistic behaviour Particular attention is given to clarifying the relationship between testing and simulation semantics and characterising bisimulations from metric logical and algorithmic perspectives Besides presenting recent research outcomes in probabilistic concurrency theory the book exemplifies the use of many mathematical techniques to solve problems in computer science which is intended to be accessible to postgraduate students in Computer Science and Mathematics It can also be used by researchers and practitioners either for advanced study or for technical reference

Processes, Terms and Cycles: Steps on the Road to Infinity Aart Middeldorp, Vincent van Oostrom, Femke van Raamsdonk, Roel de Vrijer, 2005-12-11 This Festschrift is dedicated to Jan Willem Klop on the occasion of his 60th birthday The volume comprises a total of 23 scientific papers by close friends and colleagues written specifically for this book The papers are different in nature some report on new research others have the character of a survey and again others are mainly expository Every contribution has been thoroughly refereed at least twice In many cases the first round of referee reports led to significant revision of the original paper which was again reviewed The articles especially focus upon the lambda calculus term rewriting and process algebra the fields to which Jan Willem Klop has made fundamental contributions

Theory and Practice of Computation Shin-ya Nishizaki, Masayuki Numao, Jaime Caro, Merlin Teodosia Suarez, 2019-09-20 This volume contains the papers presented at the 8th Workshop on Computing Theory and Practice WCTP 2018 and is devoted to theoretical and practical approaches to computation The conference was organized by four top universities in Japan and the Philippines the Tokyo Institute of Technology Osaka University the University of the Philippines Diliman and De La Salle University The proceedings provide a broad view of the recent developments in computer science research in Asia with an emphasis on Japan and the Philippines The papers focus on both theoretical and practical aspects of computations such as programming language theory modeling of software systems empathic computing and various

applications of information technology The book will be of interest to academic and industrial researchers interested in recent developments in computer science research *Handbook of Automated Reasoning* Alan J.A. Robinson, Andrei Voronkov, 2001-06-21 **Handbook of Automated Reasoning Software Safety and Security** NATO Emerging Security Challenges Division, 2012 Recent decades have seen major advances in methods and tools for checking the safety and security of software systems Automatic tools can now detect security flaws not only in programs of the order of a million lines of code but also in high level protocol descriptions There has also been something of a breakthrough in the area of operating system verification This book presents the lectures from the NATO Advanced Study Institute on Tools for Analysis and Verification of Software Safety and Security a summer school held at Bayrischzell Germany in 2011 This Advanced Study Institute was divided into three integrated modules Foundations of Safety and Security Applications of Safety Analysis and Security Analysis Subjects covered include mechanized game based proofs of security protocols formal security proofs model checking using and building an automatic program verifier and a hands on introduction to interactive proofs Bringing together many leading international experts in the field this NATO Advanced Study Institute once more proved invaluable in facilitating the connections which will influence the quality of future research and the potential to transfer research into practice This book will be of interest to all those whose work depends on the safety and security of software systems

Model-Based Design for Embedded Systems Gabriela Nicolescu, Pieter J. Mosterman, 2018-09-03 The demands of increasingly complex embedded systems and associated performance computations have resulted in the development of heterogeneous computing architectures that often integrate several types of processors analog and digital electronic components and mechanical and optical components all on a single chip As a result now the most prominent challenge for the design automation community is to efficiently plan for such heterogeneity and to fully exploit its capabilities A compilation of work from internationally renowned authors *Model Based Design for Embedded Systems* elaborates on related practices and addresses the main facets of heterogeneous model based design for embedded systems including the current state of the art important challenges and the latest trends Focusing on computational models as the core design artifact this book presents the cutting edge results that have helped establish model based design and continue to expand its parameters The book is organized into three sections Real Time and Performance Analysis in Heterogeneous Embedded Systems Design Tools and Methodology for Multiprocessor System on Chip and Design Tools and Methodology for Multidomain Embedded Systems The respective contributors share their considerable expertise on the automation of design refinement and how to relate properties throughout this refinement while enabling analytic and synthetic qualities They focus on multi core methodological issues real time analysis and modeling and validation taking into account how optical electronic and mechanical components often interface Model based design is emerging as a solution to bridge the gap between the availability of computational capabilities and our inability to make full use of them yet This approach enables teams to start

the design process using a high level model that is gradually refined through abstraction levels to ultimately yield a prototype
When executed well model based design encourages enhanced performance and quicker time to market for a product
Illustrating a broad and diverse spectrum of applications such as in the automotive aerospace health care consumer
electronics this volume provides designers with practical readily adaptable modeling solutions for their own practice
