Australia From Space:

Australia in Space Kerrie A. Dougherty, 2017-12-31 The exploration of space was seen as the greatest adventure of the Twentieth Century while in the Twenty First Century space based services have become an integral part of our daily lives Although it is not often recognised Australia has had its part to play in setting the world on the road to the stars and was one of the earliest nations to launch its own satellite Today the country is one of the largest users of space based services This revised and updated edition of Space Australia tells the story of Australia s involvement with space activities from the earliest rocketeers to the latest satellite projects It describes the vision high hopes and achievements of professional space scientists and engineers in both the civil and defence spheres as well as the inspired amateurs and the new breed of young space entrepreneurs who want to contribute to Australia s space future The book also highlights the challenges of maintaining an Australian commitment to space activities through changing political and economic circumstances **Australia Space Agency and Programs Handbook Volume 1 Strategic Information and Developments** IBP USA, 2011 2011 Updated Reprint Updated Annually Australia Space Agency and Programs Handbook **Australian Perspectives on Global Air and Space Power** Nicole Townsend, Kus Pandey, Jarrod Pendlebury, 2023-03-01 This book surveys historical and emerging global air and space power issues and provides a multidisciplinary understanding of the application of air and space power in the past and present while exploring potential future challenges that global air forces may face Bringing together leading and emerging academics professionals and military personnel from Australia within the field of air and space power this edited collection traces the evolution of technological innovations as well as the ethical and cultural frameworks which have informed the development of air and space power in the 20th and 21st centuries and contemplates the future It covers topics such as the insurgents use of drones the ethics of air strikes the privatisation of air power the historical trajectory of air power strategy and the sociological implications of an air force identity While many of the chapters use Australian based case studies for their analysis they have broader applicability to a global readership and several chapters examine other nations experiences including those of the United States and the United Kingdom This accessible illuminating book is an important addition to contemporary air and space power literature and will be of great interest to students and scholars of air and space power air warfare military and international history defence studies and contemporary strategic studies as well as military professionals **The Oxford Handbook of Space Security** Saadia M. ATF Press,2021-01-14 The space sector worldwide is experiencing a shift from traditional activities involving large heavy launch vehicles and satellites to a much faster paced NewSpace paradigm NewSpace is primarily driven by private organizations and is characterised by smaller and lighter missions involving Smallsats The space launch sector is primarily the domain of the Northern Hemisphere however this is beginning to change as Southern Hemisphere nations seek to pursue access to space in their own right This report considers three scenarios through which Southern Hemisphere nations may pursue access to space The third of these scenarios is then expanded upon to explore the benefits of an international collaborative framework to facilitate this access Australia is used as a case study to identify considerations for enabling access within the framework

Risk Management in Outer Space Activities Maria A. Pozza,Joel A. Dennerley,2022-02-09 Risk Management in Outer Space Activities assesses selected risks associated with space activities from an Australian and New Zealand perspective The book explores the rise of commercial space activities and considers the development of Australia and New Zealand s regulatory frameworks and how they are equipped to address new and emerging risks in the space sector The book examines the juxtaposition of international space law against the domestic legal regimes of Australia and New Zealand and how these regulatory frameworks are designed to create governance mechanisms to control space risk Both national jurisdictions approach space risk from the perspective of liability and international legal obligations but as a result of their different historical space trajectories their risk approaches differ This is illustrated by research that suggests that from an Australian point of view much of its space industry development has been influenced by Cold War era military and national security concerns On the other hand the New Zealand perspective is grounded on the rapid market led commercial development that is currently underway in the country The book examines a

variety of risks that can and do emerge in the course of undertaking space activities It does this by presenting a series of space risk case studies There are chapters devoted to examining commercial space risks space insurance the risks posed by space debris cybersecurity and space assets light pollution as a risk for astronomy and the risks inherent in landing objects on the Moon The work contained in this book is intended to provide a clear practical and informed approach to understanding risk management in outer space activities It will appeal to policy makers risk professionals space lawyers national space agencies as well as academics researchers and students *The Power of the Space Club* Deganit Paikowsky, 2017-07-20 This book analyses the decisions of nations to develop indigenous space programs in order to become a leading world power **Year Book Australia, 1990 No. 73** Australian Bureau of Statistics, **Power, State and Space** Marco Aliberti, Ottorino Cappelli, Rodrigo Praino, 2023-07-18 This book explains on what basis a nation can claim the status of space power what are the criteria differentiating a space power from lesser space actors and how their spacepower can be empirically measured and assessed To this end it sets forth a comprehensive multidisciplinary framework to enable a dynamic comparison of space actors and of the pathways that lead them in and out of the space powers club Drawing upon a critical review of the existing literature it conceptualises spacepower as a form of state power based on the complex interplay between the two defining dimensions of stateness namely the well studied dimension of capacity and the often neglected yet exceedingly important dimension of autonomy The book demonstrates that only actors possessing high levels of both autonomy and capacity qualify as space powers Different levels of either capacity or autonomy produce other types of space actors including skilled spacefarers self reliant spacefarers primed spacefarers and emerging space actors This innovative conceptual framework is complemented by an in depth comparative assessment that collects and processes a large amount of hard to find data on the most active global space actors and aggregates multiple indicators into a compound non hierarchical index of space power visualised in the form of a matrix
