Cognitive and Mental Health Improvement Under- and

Post-COVID-19, volume III Yuka Kotozaki, Gabriele Nibbio, Chong Chen, 2025-04-01 This Research Topic is a part of a collection on the topic of Cognitive and Mental Health Improvement Under and Post COVID 19. An increasing body of research suggests that the COVID 19 pandemic has worsened global mental health and caused more cognitive impairments. Whereas the COVID 19 pandemic is still ongoing in some regions, it is expected to be ending for most regions in the very near future. From a psychological, psychiatric, and public mental health perspective, it is of vital importance to conduct effective and efficient interventions to promote cognitive and mental health for they not only are essential for us to cope with the ongoing pandemic but also necessary for us to rebuild a better world post the pandemic. Not to say that a healthy cognitive and mental health state is at the core of human wellbeing and deserves its own place. From previous studies and everyday practices, we already know that regular exercise, appropriate sleep, nutritious diet, close social ties, connection with nature, mindfulness, among others, help improve cognition and boost mental health. However, the optimal regimen for each specific cognitive and mental health outcome for a specific population, including both those of healthy and clinical, is unclear and remains to be identified. Furthermore, the underlying psychological, physiological, and neurobiological mechanisms through which each activity or intervention improves cognition and promotes mental health are to be clarified.

A First Course in Structural Equation Modeling Tenko Raykov, George A. Marcoulides, 2006 In this book, authors Tenko Raykov and George A. Marcoulides introduce students to the basics of structural equation modeling (SEM) through a conceptual, nonmathematical approach. For ease of understanding, the few mathematical formulas presented are used in a conceptual or illustrative nature rather than a computational one. Featuring examples from EQS, LISREL, and Mplus, *A First Course in Structural Equation Modeling* is an excellent beginner's guide to learning how to set up input files to fit the most commonly used types of structural equation models with these programs. The basic ideas and methods for conducting SEM are independent of any particular software. Highlights of the Second Edition include: Review of latent change growth analysis models at an introductory level; Coverage of the popular Mplus program; Updated examples of LISREL and EQS. A CD that contains all of the text's LISREL, EQS, and Mplus examples. *A First Course in Structural Equation Modeling* is intended as an introductory book for students and researchers in psychology, education, business, medicine, and other applied social, behavioral, and health sciences with limited or no previous exposure to SEM. A prerequisite of basic statistics through regression analysis is recommended. The book frequently draws parallels between SEM and regression, making this prior knowledge helpful.
