down to their supply chains The book discusses what is and what is not leadership covering such topics as statistics based management process improvement and human resources The author accomplishes this through a blend of Lean culture and managerial theory as well as his military experience In addition the author contrasts many opposing subjects such as efficiencies of scale versus efficiencies of build automation versus process improvement process innovation versus product innovation technical versus tactical proficiency and pull versus push production With most books focused on Lean initiatives there is a tremendous amount of benefit involved in creating customer value while reducing waste but this book takes a holistic approach blending in modern managerial theory team leadership skills and economics The result is a book that changes how the reader approaches business Essentially the purpose of this book is to blend modern management theories with the culture of Lean and perhaps a sprinkling of economics to show current business leaders how to create organizations that are as customer oriented and highly efficient in delivering value as possible If one thinks of each role in an organization as a spot on an assembly line where everything each person does creates output someone else uses the question becomes whether or not each person s activities maximize the effectiveness of others Do we as organizations set ourselves up for success or for failure Most companies if they answer honestly would say A little bit of both This book is about helping those companies improve     Fire Management ,1952     A Handbook for Air Raid Wardens ,1941     *Handbook for Auxiliary Firemen* United States.
