COMPOSITE MATERIALS: Testing and design ,1972 Temperature Based Stress Analysis of Notched

Members Eric Hopkins Jordan,1978 The purpose of this effort was to develop and demonstrate a method of experimentally determining both elastic and plastic strain distributions in metallic materials This was accomplished by recording minute temperature changes on the surface of the material as it was subjected to various loading conditions Mathematical relationships relating these changes to the strain in the material was developed and verified Much of the success of this effort was due to the development of thermocouple attachment and readout technique that recorded minute temperature changes 0 1 degree centigrade at ten millisecond sample intervals This small time period sampling assures that heat has not been conducted away from the thermocouple attachment point The thermocouples consisting of two 13 mm dissimilar metal wires were attached to the surface 0 1 mm apart by discharging a large capacitor grounded to the specimen The small size permits the mounting of several thermocouples in a small area The determination of plastic zone outlines is thereby facilitated

Practical Applications of Quantitative Metallography James L. McCall,James H. Steele,1984 An improved procedure based on the intercept method of measuring the grain size of single phase microstructures has been developed that provides a quantitative description of the grain size yet is fast The procedure combines the statistical advantage of using large numbers with the advantage of interpreting the data as a normal distribution as verified by the chi square test Application of the procedure to ferritic microstructures representative of best and worst case conditions indicates that accuracies on the order of 3 percent at a 95 percent confidence level can be achieved In addition the procedure is sensitive enough to distinguish a randomly mixed duplex grain structure The measurements associated with a two phase microstructure can be more precisely quantified through determination of volume fractions using a Pp measurement based on the use of an appropriate grid network the coefficient of variation statistic and the Poisson distribution The analysis is demonstrated for an a priori system for which the percent accuracy and confidence level can be specified for the volume fraction measurement simply from calculation of the average value for Pp *Transactions of the ...
