Aircraft Gas Turbine Engine Monitoring Systems:

Guide to Limited Engine Monitoring Systems for Aircraft Gas Turbine Engines E-32 Aerospace Propulsion Systems Health Management, 2016 This Aerospace Information Report AIR describes a Limited Engine Monitoring System that can be used by the flight crew or the maintenance staff or both to monitor the health of gas turbine engines in aircraft. This AIR considers monitoring of gas path performance and mechanical parameters and systems such as low cycle fatigue counters and engine history recorders. It also considers typical measurement system accuracies and their impact. This AIR is intended as a technical guide. It is not intended to be used as a legal document or standard. AIR 1873 supplements ARP 1587 Aircraft Gas Turbine Engine Monitoring System Guide. The Aerospace Information Report AIR has been superseded by a completely new document ARP5120 which provides guidance on how to develop and implement an integrated end to end health management system for gas turbine engine applications. The original AIR1873A information was updated and transformed into ARP5120. SAE ARP5120 consolidates SAE AIR1873 4061B 4175A and 5120 into one document per the direction of the SAE E32 committee. Aircraft Gas Turbine Engine Monitoring Systems, 1981-01-01 Aircraft Gas Turbine Engine Monitoring Systems, 1988 *Aircraft Gas Turbine Engine Monitoring Systems*, 1988-01-01 **Guide to Limited Engine Monitoring Systems for Aircraft Gas Turbine Engines**, 1988 **Aircraft Gas Turbine Engine Monitoring Systems** SAE E-32 Committee--Aircraft Gas Turbine Engine Monitoring, *AIRCRAFT GAS TURBINE ENGINE MONITORING SYSTEM GUIDE* E-32 Aerospace Propulsion Systems Health Management, 1992 This SAE Aerospace Recommended Practice ARP is a system guide for Engine Monitoring System EMS definition and implementation. This keystone document addresses EMS benefits, capabilities, and requirements. It includes EMS in flight and ground applications consisting of people, equipment, and software. It recommends EMS requirements that are a balance of selected benefits and available capabilities. This ARP purposely addresses a wide range of EMS architecture. The intent is to provide an extensive list of possible EMS design options. NOTE a) Section 3 describes an EMS b) Sections 4 and 5 outline benefits and capabilities that should be considered for study purposes to define EMS baselines for how much engine monitoring is required c) Section 6 provides implementation requirements that should be considered for an EMS after study baseline levels of EMS complexity are selected. **Guide to Temperature Monitoring in Aircraft Gas Turbine Engines** E-32 Aerospace Propulsion Systems Health Management, 2014 This SAE Aerospace Information Report AIR provides an overview of temperature measurement for engine monitoring systems in various areas of aircraft gas turbine engines while focusing on current usage and methods, systems selection criteria, and types of hardware. This document emphasizes temperature monitoring for diagnostics and condition monitoring purposes. AIR1900A has been reaffirmed to comply with the SAE five year review policy. **Lessons Learned From Developmental and Operational Turbine Engine Monitoring Systems** E-32 Aerospace Propulsion Systems Health Management, 1994 The purpose of this AIR is to document some of the valuable lessons learned.

from several developmental and operational turbine engine monitoring programs This AIR is not intended to be used as a standard or legal document but rather to provide an objective statement of the more important lessons learned during the development and operation of engine monitoring systems with widely varying operational requirements It is through the use of ARP 1587 Aircraft Gas Turbine Engine Monitoring System Guide and SP 478 Aircraft Gas Turbine Engine Monitoring Systems an awareness of prior lessons learned and a clear definition of engine operational maintenance concepts that future engine monitoring systems can be developed to meet the specific needs of the user

Turbine Engine Monitoring Systems: Can They Benefit Component Improvement Program Management?. Len J. Neist, AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH SCHOOL OF SYSTEMS AND LOGISTICS., 1987 The purpose of this study was to identify if the data collected by Turbine Engine Monitoring Systems TEMS could benefit an engine's Component Improvement Program CIP management The initial plan was to identify and assess any benefits by comparing an engine with a CIP PWA TF30 but not TEMS against an engine with a CIP and a TEMS GE TF34 This was not possible however because the TEMS data were not being used to assist with TF34 CIP management because of the lack of a Central Data Base to collate and transform the data The engine duty cycle was identified as the key to many important areas of a CIP including engine component life usage and failure replication and diagnosis As mentioned in the previous paragraph the current methods used to identify an engine's duty cycle lack the accuracy and reliability that are required to manage modern gas turbine engines The main thrust of the recommendations is that a central data base be established so that the TF34 CIP manager can utilize TEMS data In addition a comparison using cost analysis is recommended to firmly establish the benefits to both long and short term engine management
