Apes Monkeys Children And The Growth Of Mind The Developing Child:

Apes, Monkeys, Children, and the Growth of Mind Juan Carlos Gómez, 2009-07 What can the study of young monkeys and apes tell us about the minds of young humans In this fascinating introduction to the study of primate minds Juan Carlos Gomez identifies evolutionary resemblances and differences between human children and other primates He argues that primate minds are best understood not as fixed collections of specialized cognitive capacities but more dynamically as a range of abilities that can surpass their original adaptations In a lively overview of a distinguished body of cognitive developmental research among nonhuman primates Gomez looks at knowledge of the physical world causal reasoning including the chimpanzee like errors that human children make and the contentious subjects of ape language theory of mind and imitation Attempts to teach language to chimpanzees as well as studies of the quality of some primate vocal communication in the wild make a powerful case that primates have a natural capacity for relatively sophisticated communication and considerable power to learn when humans teach them Gomez concludes that for all cognitive psychology's interest in perception information processing and reasoning some essential functions of mental life are based on ideas that cannot be explicitly articulated Nonhuman and human primates alike rely on implicit knowledge Studying nonhuman primates helps us to understand this perplexing aspect of all primate minds

Apes, Monkeys, Children, and the Growth of Mind Juan Carlos Gómez, 2004-06-30 In this fascinating introduction to primate minds Gomez identifies evolutionary resemblances and differences between human children and other primates He argues that primate minds are best understood not as fixed collections of specialized cognitive capacities but instead as a range of abilities that can surpass their original adaptations

Darwinian Biolinguistics Antonino Pennisi, Alessandra Falzone, 2016-12-15 This book proposes a radically evolutionary approach to biolinguistics that consists in considering human language as a form of species specific intelligence entirely embodied in the corporeal structures of Homo sapiens The book starts with a historical reconstruction of two opposing biolinguistic models the Chomskian Biolinguistic Model CBM and the Darwinian Biolinguistic Model DBM The second part compares the two models and develops into a complete reconsideration of the traditional biolinguistic issues in an evolutionary perspective highlighting their potential influence on the paradigm of biologically oriented cognitive science The third part formulates the philosophical evolutionary and experimental basis of an extended theory of linguistic performativity within a naturalistic perspective of pragmatics of verbal language The book proposes a model in which the continuity between human and non human primates is linked to the gradual development of the articulatory and neurocerebral structures and to a kind of prelinguistic pragmatics which characterizes the common nature of social learning In contrast grammatical semantic and pragmatic skills that mark the learning of historical natural languages are seen as a rapid acceleration of cultural evolution The book makes clear that this acceleration will not necessarily favour the long term adaptations for Homo sapiens

Practices of Reason Ladislav Koreň, 2021-04-13 This book offers new insights into the nature of human rational capacities by engaging inferentialism with empirical research in the cognitive sciences Inferentialism advocates that humans unique kind of intelligence is discursive and rooted in competencies to make assess and justify claims This approach provides a rich source of valuable insights into the nature of our rational capacities but it is underdeveloped in important respects For example little attempt has been made to assess inferentialism considering relevant scientific research on human communication cognition or reasoning By engaging philosophical and scientific approaches in a productive dialogue this book shows how we can better understand human rational capacities by comparing their respective strengths and weaknesses In this vein the author critically revisits and constructively develops central themes from the work of Robert Brandom and other language rationalists the nature of the assertoric practice and its connection to reasoned discourse the linguistic constitution of the shared space of reasons the social nature and function of reasoning the intersubjective roots of social normative practices and the nature of objective thought Practices of Reason will be of interest to scholars and advanced students working in philosophy of mind philosophy of language and philosophy of logic
