Application Of Proteolytic Enzymes To Protein Structure Studies Volume I:

Application of Proteolytic Enzymes to Protein Structure Studies Elemer Mihalyi, 1978 *Application of Proteolytic Enzymes to Protein Structure Studies* Elemer Mihalyi, 1978 **Protein Structure-Function Relationships in Foods**

Rickey Y. Yada, R.L. Jackman, 2012-12-06 Food proteins constitute a diverse and complex collection of biological macromolecules. Although contributing to the nutritional quality of the foods we consume, proteins also act as integral components by virtue of their diverse functional properties. The expression of these functional properties during the preparation, processing, and storage of foods is largely dictated by changes to the structure or structure-related properties of the proteins involved. Therefore, germane to the optimal use of existing and future food protein sources is a thorough understanding of the nature of the relationships between structure and function. It is the goal of this book to aid in better defining these relationships. Two distinct sections are apparent: firstly, those chapters which address structure-function relationships using a variety of food systems as examples to demonstrate the intricacies of this relationship; and secondly, those chapters which discuss techniques used to either examine structural parameters or aid in establishing quantitative relationships between protein structure and function. The editors would like to thank all contributors for their assistance, cooperation, and above all, their patience in putting this volume together, and the following companies/organizations for their financial support without which it would not have been the success it was: Ault Foods Limited, Best Foods Canada Limited, Natural Sciences and Engineering Research Council of Canada, Ontario Ministry of Agriculture and Food, Quest International Canada Inc, and University of Guelph. R Y Y R LJ *Techniques for the Analysis of Membrane Proteins* C. Ragan, 2012-12-06 A preface should justify the existence of the book it precedes, and this is invariably done in scientific texts by reference to the explosive growth of the field since the last such volume appeared. In molecular biology, most fields can be justifiably described as growing explosively, as should be the case for a young and vigorous science. But the study of membrane proteins stands out as one which has taken giant strides in the last few years. Ignorance of the structure and function of membrane proteins at the molecular level was certainly not due to lack of interest but rather was a result of lack of appropriate techniques. It has, above all, been the development of new experimental methods which has wrenched membrane biochemistry out of what Anthony Martonosi fetchingly called its romantic phase. Lots of ideas and few facts into an era when the determination of membrane protein structure and mechanism is a reasonable goal. Membrane proteins are generally classified as peripheral or integral. Peripheral proteins are relatively easily dissociated from membranes by mild treatments, whence their study is essentially no different to that of soluble proteins. This book therefore concentrates on integral proteins which are strongly bound to the membrane by hydrophobic interactions with lipids. A crucial step in their study is of necessity the development of methods of solubilization and purification under non-denaturing conditions. **Cumulative Series Index for CRC Handbook of Biochemistry and Molecular Biology** Gerald D. Fasman, 2019-10-30 First Published in 1977, this book serves as a directory

for the handbook of biochemistry and molecular biology Hypercholesterolemia, Hypocholesterolemia, Hypertriglyceridemia, in Vivo Kinetics Claude L. Malmendier, P. Alaupovic, H. Bryan Brewer, 2013-03-13 The past two decades have seen steady progress in our understanding of the pathogenesis of atherosclerosis The role of low density lipoprotein (LDL) increase and of LDL receptor deficiency or malfunctions in familial hypercholesterolemia has been largely enlightened by the works of Brown and Goldstein These authors postulated also that modification of LDL to a form recognized by the scavenger or acetyl LDL receptor may be required for lipid loading of macrophage derived foam cells in the lesions A growing body of evidence suggests that oxidative modification of LDL could enhance its atherogenicity by its implication as a factor in the generation of foam cells Thus if the role of LDL in the pathogenesis of hypercholesterolemia was well established a great deal of information appears currently on new approaches such as the mechanisms leading to the accumulation of foam cells the impact of LDL structural alterations notably oxidation and the role of gene mutations of apolipoprotein B and of LDL receptor The opening topic is devoted to these new avenues outlined in the field of hypercholesterolemia The first part concerns the genetic aspects of atherosclerosis mainly the genetics of apo B and apo A lipoproteins in their transcriptional regulation the amino acid mutations of the apo B gene and of the LDL receptor gene the structural domains and the acylation sites of apoprotein B Advances in Food and Nutrition Research , 1991-10-23 *Advances in Food and Nutrition Research* *Iodine Labeled Plasma Proteins* Erwin Regoezi, 2019-07-17 First Published in 1984 this book offers comprehensive insight into iodine labelled proteins in the blood Carefully compiled and filled with a vast repertoire of notes diagrams and references this book serves as a useful reference for students of hematology and other practitioners in their respective fields Human Apolipoprotein Mutants III Cesare R. Sirtori, Guido Franceschini, Bryan H. Jr. Brewer, 2013-06-29 Hopes to develop apolipoproteins for diagnostic or even better therapeutic purposes are growing Areas of use may range from arterial disease to AIDS fertilization programs neurological or inflammatory disorders and the like However these young members of the large family of circulating proteins still deserve careful study both in terms of structural and functional properties and of their pathological changes In addition related molecules in particular belonging to the family of enzymes such as lipases and acyltransferases offer exciting insight into the mechanisms of regulation of lipid transport and exchange Described here is the use of apolipoproteins and enzymes in the diagnosis of coronary and cerebrovascular disease Structural and functional changes of apolipoproteins are related to lipid transport and binding to different receptors Further the development of apolipoprotein drugs and their possible clinical use for vascular and non vascular disease is discussed and finally an overview on lipoprotein transformation processes expression systems and natural mutants is provided **Macromolecular Biorecognition** Irwin Chaiken, Emilia Chiancone, Angelo Fontana, Paolo Neri, 2012-12-06
