

the Cliff Palace is the centerpiece of the Mesa Verde National Park in southwestern Colorado. Using tree-ring dating, we know the village was abruptly abandoned around 1295. The back cover photo shows the ruins in the 1930s shortly after they were discovered, before they were excavated and stabilized. The population has been estimated to be as high as 1,000 at its peak. By 1340, from 7,000 to 15,000 descendants lived in the region; today there are about 800. Archaeologists believe that a war divided the village into two parts, with symmetry between the parts. What was the structure of this society?

In this course, you will benefit from the traditions that developed over the ages, meet some historical giants in the field of mathematics, and take advantage of modern technological tools, such as graphing calculators, to explore ideas. Mathematics will be used to date artifacts, to analyze population movements and group structures, to understand our perception of time, and to explore symmetry. You will see how mathematics is used to help us understand our past, to organize our present, and to plan our future.
