Aging and the Brain Robert D. Terry, 1988 *Brain Aging* David R. Riddle, 2007-04-19

Recognition that aging is not the accumulation of disease but rather comprises fundamental biological processes that are

amenable to experimental study is the basis for the recent growth of experimental biogerontology As increasingly sophisticated studies provide greater understanding of what occurs in the aging brain and how these changes occur

Handbook of the Psychology of Aging K Warner Schaie, Sherry L. Willis, 2010-12-21 The Handbook of the Psychology of Aging Seventh Edition provides a basic reference source on the behavioral processes of aging for researchers graduate students and professionals It also provides perspectives on the behavioral science of aging for researchers and professionals from other disciplines The book is organized into four parts Part 1 reviews key methodological and analytical issues in aging research It examines some of the major historical influences that might provide explanatory mechanisms for a better understanding of cohort and period differences in psychological aging processes Part 2 includes chapters that discuss the basics and nuances of executive function the history of the morphometric research on normal brain aging and the neural changes that occur in the brain with aging Part 3 deals with the social and health aspects of aging It covers the beliefs that individuals have about how much they can control various outcomes in their life the impact of stress on health and aging and the interrelationships between health disparities social class and aging Part 4 discusses the emotional aspects of aging family caregiving and mental disorders and legal capacities in older adults Contains all the main areas of psychological gerontological research in one volume Entire section on neuroscience and aging Begins with a section on theory and methods Edited by one of the father of gerontology Schaie and contributors represent top scholars in gerontology

The Elements of Cognitive Aging Paul Verhaeghen, 2014 Provides a quantitative overview of the vast literature on aging and speeded tasks based on a large number of meta analyses many of them new to this book This volume thus brings together for the first time almost everything we know about aging and processing speed Jacket page 2 *Insights in*

neurocognitive aging and behavior: 2022 Kristy A. Nielson, Annalena Venneri, Shin Murakami, 2024-01-30 **Aging Brain and Ergot Alkaloids** A. Agnoli, 1983 *Aging and Cognitive Processes* Fergus Craik, 2012-12-06 For a variety of reasons there has been an explosion of interest in research on aging over the past few years The reasons include an awareness that a large and growing proportion of our population is over 65 and that research findings can contribute to their health satisfaction and efficiency as members of society the fact that funding agencies have endorsed the need for more research effort in the area by setting up special programs and also the fact that researchers themselves are turning more to practical problems as many theoretical issues in experimental psychology at least seem to remain as intractable as ever Thus at present there is widespread interest in aging but there is also a lack of knowledge as to what has already been accomplished in the area what the theoretical issues are and what factors contribute to the methodological and practical difficulties The time is propitious for meetings of experts in various aspects of the aging process both to discuss among themselves latest advances in the field and also to integrate known information for researchers and practitioners In the summer of 1980 we organized such a meeting as the 10th annual psychology symposium to be held at the Erindale Campus of the University of Toronto The topic chosen was Aging and Cognitive Processes and the edited contributions to the symposium form the chapters of the present book **Annual Review of Gerontology and Geriatrics, Volume 34, 2014** Richard L.
