Applied Fluvial Geomorphology For River Engineering And Management:

Applied Fluvial Geomorphology for River Engineering and Management C. R. Thorne, Richard D. Hey, Malcolm D. Newson, 1997 This text presents an overview of fluvial geomorphology how water movement effects the surface features of the Earth and aims to provide river engineers and managers with an understanding of natural channel forms and fluvial processes

Guidebook of Applied Fluvial Geomorphology for River Engineering and Management Colin R. Thorne, University of Nottingham. Department of Geography, 1995

Guidebook of Applied Fluvial Geomorphology David A Sear, Malcolm D Newson, Colin R Thorne, Phillip J Soar, Kevin S Skinner, 2009-11-27 In this book the authors use their extensive experience gained through fieldwork analysis and input to the design process to provide a thorough understanding of geomorphology in the river environment and describe effective ways to incorporate geomorphological science into river engineering and management

River Channel Management Peter Downs, Ken Gregory, 2014-02-24 River Channel Management is the first book to deal comprehensively with recent revolutions in river channel management It explores the multi disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind use channel restoration where appropriate and are designed to be sustainable River Channel Management is divided into five sections The Introduction outlines the need for river channel management Retrospective Review offers an overview of twentieth century engineering methods and the ways that river channel systems operate Realisation explains how greater understanding of river channel adjustments channel hazards and river basin planning created a context for twenty first century management Requirements for Management explains and examines environmental assessment restoration based approaches and methods that work towards design with nature Final Revision speculates about prospects for twenty first century river channel management River Channel Management is written for higher level undergraduates and for postgraduates in geography ecology engineering planning geology and environmental science for professionals involved in river channel management and for staff in environmental agencies

The SAGE Handbook of Geomorphology Kenneth J Gregory, Andrew S Goudie, 2011-06-22 Geomorphology is the study of the Earth s diverse physical land surface features and the dynamic processes that shape these features Examining natural and anthropogenic processes The SAGE Handbook of Geomorphology is a comprehensive exposition of the fundamentals of geomorphology that examines form process and applications of the discipline Organized into five substantive sections the Handbook is an overview of Foundations and Relevance including the nature and scope of geomorphology the origins and development of geomorphology the role and character of theory in geomorphology geomorphology and environmental management and geomorphology and society Techniques and Approaches including observations and experiments geomorphological mapping the significance of models process and form dating surfaces and sediment remote sensing in geomorphology GIS in geomorphology biogeomorphology human activity Process and Environment including the evolution of

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems

Stream Restoration in Dynamic Fluvial Systems Andrew Simon, Sean J. Bennett, Janine M. Castro, 2013-05-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 194 Stream Restoration in Dynamic Fluvial Systems Scientific Approaches Analyses and Tools brings together leading contributors in stream restoration science to provide comprehensive consideration of process based approaches tools and applications of techniques useful for the implementation of sustainable restoration strategies Stream restoration is a catchall term for modifications to streams and adjacent riparian zones undertaken to

improve geomorphic and or ecologic function structure and integrity of river corridors and it has become a multibillion dollar industry A vigorous debate currently exists in research and professional communities regarding the approaches applications and tools most effective in designing implementing and assessing stream restoration strategies given a multitude of goals objectives stakeholders and boundary conditions More importantly stream restoration as a research oriented academic discipline is at present lagging stream restoration as a rapidly evolving practitioner centric endeavor The volume addresses these main areas concepts in stream restoration river mechanics and the use of hydraulic structures modeling in restoration design ecology ecologic indices and habitat geomorphic approaches to stream and watershed management and sediment considerations in stream restoration Stream Restoration in Dynamic Fluvial Systems will appeal to scholars professionals and government agency and institute researchers involved in examining river flow processes river channel changes and improvements watershed processes and landscape systematics

Contaminated Rivers Jerry R. Miller, Suzanne M. Orbock Miller, 2007-05-06 This book provides an introductory understanding of fluvial geomorphic principles and how these principles can be integrated with geochemical data to cost effectively characterize assess and remediate contaminated rivers The book stresses the importance of needing to understand both geomorphic and geochemical processes Thus the overall presentation is first an analysis of physical and chemical processes and second a discussion of how an understanding of these processes can be applied to specific aspects of

site assessment and remediation Such analyses provide the basis for a realistic prediction of the kinds of environmental responses that might be expected for example during future changes in climate or land use *Assessment of Changes in Channel Morphology and Bed Elevation in Mad River, California, 1971-2000* Kevin Knuuti, 2003 The U S Army Corps of Engineers currently regulates gravel mining activities in Humboldt County CA under the authority described in Sec 404 of the Clean Water Act In order to better understand the effects gravel mining has had on the Mad River the U S Army Engineer District San Francisco initiated this study to examine changes in channel morphology and bed elevation between 1971 and 2000 This study focused on existing cross section data and historic aerial photography from a variety of sources and river sediment bed load and bed material data collected by the USGS It also used new cross section data collected in 2000 and gravel extraction records This information was used to quantify geomorphic changes in the river to establish a sediment budget and to determine a sustainable yield for gravel extraction based on maintaining the river in an equilibrium condition
