Applied Algebra Darel W. Hardy, Fred Richman, Carol L. Walker, 2011-08-10 Using mathematical tools from number theory and finite fields *Applied Algebra Codes Ciphers and Discrete Algorithms* Second Edition presents practical methods for solving problems in data security and data integrity It is designed for an applied algebra course for students who have had prior classes in abstract or linear algebra While the content has been reworked and improved this edition continues to cover many algorithms that arise in cryptography and error control codes New to the Second Edition A CD ROM containing an interactive version of the book that is powered by Scientific Notebook a mathematical word processor and easy to use computer algebra system New appendix that reviews prerequisite topics in algebra and number theory Double the number of exercises Instead of a general study on finite groups the book considers finite groups of permutations and develops just enough of the theory of finite fields to facilitate construction of the fields used for error control codes and the Advanced Encryption Standard It also deals with integers and polynomials Explaining the mathematics as needed this text thoroughly explores how mathematical techniques can be used to solve practical problems About the Authors Darel W Hardy is Professor Emeritus in the Department of Mathematics at Colorado State University His research interests include applied algebra and semigroups Fred Richman is a professor in the Department of Mathematical Sciences at Florida Atlantic University His research interests include Abelian group theory and constructive mathematics Carol L Walker is Associate Dean Emeritus in the Department of Mathematical Sciences at New Mexico State University Her research interests include Abelian group theory applications of homological algebra and category theory and the mathematics of fuzzy sets and fuzzy logic

Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Gerard Cohen, Teo Mora, 1993-04-20 Researchers may find themselves confronted with proteases either because they play an essential role in a particular process they are studying or because they interfere with that process In either case they may need to investigate or inhibit the proteolytic activity Others may wish to use proteolytic enzymes as laboratory tools This book has been written with these investigators in mind and includes assay methods using natural and artificial substrates genetic based assays and strategies for the inhibition purification and crystallization of proteases In selected chapters the use of proteolytic enzymes to analyze proteins segregate cells or in peptide synthesis is covered *Applied Algebra, Algebraic Algorithms, and Error-correcting Codes* Teo Mora, 1989-05-23 In 1988 for the first time the two international conferences AAECC 6 and ISSAC 88 International Symposium on Symbolic and Algebraic Computation see Lecture Notes in Computer Science 358 have taken place as a Joint Conference in Rome July 4 8 1988 The topics of the two conferences are in fact widely related to each other and the Joint Conference presented a good occasion for the two research communities to meet and share scientific experiences and results The proceedings of the AAECC 6 are included in this volume The main topics are Applied Algebra Theory and Application of Error Correcting Codes Cryptography Complexity Algebra Based Methods and Applications in Symbolic Computing and
