A Human Science Model For Personality Assessment With Projective Techniques:

A Human Science Model for Personality Assessment with Projective Techniques Richard Henry Dana, 1982

Handbook of Cross-Cultural and Multicultural Personality Assessment Richard H. Dana, 2000-02 Throughout the world as in the United States psychologists are increasingly being called upon to evaluate clients whose backgrounds differ from their own. It has long been recognized that standard personality and psychopathology assessment instruments carry cultural biases and in recent years efforts to correct these biases have accelerated. The Handbook of Cross Cultural and Multicultural Personality Assessment brings together researchers and practitioners from 12 countries with diverse ethnic and racial identities and training to present state of the art knowledge about how best to minimize cultural biases in the assessment of personality and psychopathology. They consider research methodology, the design and construction of standard objective and projective tests, the use of measures of acculturation, racial identity and culture specific tests, the social etiquette of service delivery and the interpretation of test data for clinical diagnosis. Ranging widely through all the relevant issues, they share a common collective vision of how culturally competent services should be delivered to clients. The Handbook offers the first comprehensive view of a consistent approach to cultural competence in assessment, a necessary precursor of effective intervention. It will become an indispensable reference for all those whose practice or research involves individuals with different ethnic and racial identities.

Personality Assessment in America Edwin I. Megargee, Charles D. Spielberger, 2019-06-07 Whereas most psychology books discuss current or future trends, this one focuses on the past. It consists of a collection of important and historically significant writings by a select group of men and women who over the past 50 years were honored by their colleagues for their distinguished contributions to the field of personality assessment. Published from 1939 through 1989, most of the papers were SPA Presidential addresses or presentations by the recipients of the Society's Distinguished Contributions Award. Taken as a whole, they provide a unique perspective on the evolution of personality assessment in America from the perspective of those who have made important contributions to that history. The writings are not merely of historical interest but intrinsically important scientific contributions, some of which were in danger of being lost or forgotten. The editors feel it is important to preserve and pass on this valuable legacy for the education and edification of later generations. It is not only its historical perspective that makes this book unique. This book provides first hand discussions of crucial issues in personality assessment written by the gifted men and women who were actually grappling with these problems at the time without knowing what the outcomes would be. Readers will find that these papers provide insights not only into the conflicts and controversies but also into the ideas, attitudes and emotions of the men and women who took part in them.
