

▲ **LM of the lip.** The cutaneous surface (Cu) and vermillion border (VB) are seen; the oral mucous membrane is at the top. The central core of the lip contains muscle fibers of the orbicularis oris (OO). Labial glands (LG) are close to the oral surface. 5×, H&E.

▲ **LM of part of the oral mucosa of the inner surface of the lip.** The nonkeratinized stratified squamous epithelium (SSE) is multilayered; its flat surface cells (arrows) retain their nuclei; its cuboidal basal cells rest on an ill-defined basement membrane (BM). The lamina propria (LP) is loose, highly cellular connective tissue. Capillaries (Cap) extend into papillae (+). 280×, H&E.

◀ **LM of the central core of the lip.** Tightly packed mucous acini of a labial gland (LG)—a tubuloacinar minor salivary gland—surround a small duct (+). Low simple columnar epithelium lines the duct. The connection of the duct is not seen in the plane of section, but it opens onto the oral surface. Adjacent skeletal muscle fibers of the orbicularis oris (OO) are organized into fascicles. The pale area between the gland and muscle is fibroelastic connective tissue (CT). 125×, H&E.

A Learning System In Histology:

A Learning System in Histology Deborah W. Vaughan, 2002 This CD ROM with accompanying manual will introduce medical allied health and undergraduate students to the logic of anatomical thinking and the microscopic structure of the body's tissues. Its correlation of low power with high power views, the quality of its images, and the ease of using the CD are particularly attractive features. It is not a full electronic atlas with hyperlinks of pictures to text but rather a review of morphology that supplements the histology lab where students look through a microscope at slides of tissue specimens. *A Learning System in Histology*, 2002 **Autograph letter signed from Léo Delibes to unidentified recipient**, 1886

Histology and Histopathology of the Aging Brain J. Ulrich, 1988-08-26 *Nano and Bio Heat Transfer and Fluid Flow* Majid Ghassemi, Azadeh Shahidian, 2017-03-15 *Nano and Bio Heat Transfer and Fluid Flow* focuses on the use of nanoparticles for bio application and bio fluidics from an engineering perspective. It introduces the mechanisms underlying thermal and fluid interaction of nanoparticles with biological systems. This book will help readers translate theory into real world applications such as drug delivery and lab on a chip. The content covers how transport at the nano scale differs from the macro scale, also discussing what complications can arise in a biologic system at the nano scale. It is ideal for students and early career researchers, engineers conducting experimental work on relevant applications, or those who develop computer models to investigate design these systems. Content coverage includes biofluid mechanics, transport phenomena, micro nano fluid flows, and heat transfer. Discusses nanoparticle applications in drug delivery. Covers the engineering fundamentals of bio heat transfer and fluid flow. Explains how to simulate, analyze, and evaluate the transportation of heat and mass problems in bio systems. The 7th International Conference on Wireless, Intelligent and Distributed Environment for Communication Isaac Woungang, Sanjay Kumar Dhurandher, 2025-02-25 This book presents the proceedings of the 7th International Conference on Wireless Intelligent and Distributed Environment for Communication WIDECOM 2024 which took place at Keene State College, Keene, New Hampshire, USA, October 16-18, 2024. The book addresses issues related to new dependability paradigms, design, and performance of dependable network computing and mobile systems, as well as issues related to the security of these systems. The goal of the conference is to provide a forum for researchers, students, scientists, and engineers working in academia and industry to share their experiences, new ideas, and research results in the above mentioned areas.
