problems of economic migration and working conditions have been the subject of interest for many years in the strongly developing trend of labor market research. The research results contained in the study relate primarily to the issues of occupational safety of Ukrainians employed in Poland. These issues are gaining importance especially when the number of people migrating from Ukraine to Poland in search of work has been growing for several years. In the face of such a large scale of Ukrainian immigrants employed in Polish enterprises there is still a lack of regulations protecting or securing the interests of employees and employers. The next research presentation highlights the problems of the circular economy which according to the author is developing too slowly in Poland. The research is valuable for systematizing the idea of a circular economy based on the theoretical and practical aspects of this phenomenon. The results of the analysis are also of practical importance for the process of modeling and implementing this idea in Poland. Further, the innovation paradigm of economic health and the prosperity of society is the subject of the research carried out based on a review of the health economy considering innovation and its impact on population growth and prosperity in the world. The research particularly highlights the consequences of socio-demographic, environmental and business changes in the field of consumer goods. The socio-technical as well as the environmental aspects of the organization are also included in the last study presented. The purpose of this study was to identify the attitudes of IT employees in the Polish ITC sector towards remote work. Since the effective and efficient collaboration of distributed employees performing remote work has become even more necessary for the success of projects, numerous research works are being conducted focusing on the consequences of remote work. The presented research results are an important contribution to the discussion of researchers and management practitioners. By publishing this monograph which covers a wide spectrum of research problems in contemporary commercial and non-profit organizations, the editors and authors presenting the results of their research express a hope that they are contributing to the widespread dissemination and enrichment of knowledge and consequently socio-economic development.

Survival of the City Edward Glaeser, David Cutler, 2021-09-07. Expansive and entertaining. A fast-paced and highly readable journey, the book serves as a useful tool in the effort to redefine the role of the city in an age of increasingly polarized politics and reminds us that urban health is as Fiorello La Guardia once remarked about cleaning the streets, not a Democratic or Republican issue. New York Times Book Review. One of our great urbanists and one of our great public health experts join forces to reckon with how cities are changing in the face of existential threats: the pandemic has only accelerated. Cities can make us sick. That's always been true: diseases spread more easily when more people are close to one another. And cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on. But cities have flourished nonetheless because they are humanity's greatest invention: indispensable engines for creativity, innovation, wealth, and civilization itself. But cities now stand at a crossroads. During the global COVID crisis, cities grew silent, the normal forms of socializing ground to a halt. How permanent are these changes? Advances in technology mean that many people can opt out of city life as never before. Will they

Are we on the brink of a post urban world City life will survive but individual cities face terrible risks argue Edward Glaeser and David Cutler and a wave of urban failure would be absolutely disastrous In terms of intimacy and inspiration nothing can replace what cities offer But great cities have always demanded great management and our current crisis has exposed fearful gaps in our capacity for good governance In America Glaeser and Cutler argue deep inequities in health care and education are a particular blight on the future of our cities solving them will be the difference between our collective good health and a downward spiral to a much darker place
