Algebraic Analysis:

Foundations of Algebraic Analysis Masaki Kashiwara, Takahiro Kawai, Tatsuo Kimura, 1986 The use of algebraic methods for studying analysts is an important theme in modern mathematics The most significant development in this field is microlocal analysis that is the local study of differential equations on cotangent bundles This treatise provides a thorough description of microlocal analysis starting from its foundations The book begins with the definition of a hyperfunction It then carefully develops the microfunction theory and its applications to differential equations and theoretical physics It also provides a description of microdifferential equations the microlocalization of linear differential equations Finally the authors present the structure theorems for systems of microdifferential equations where the quantized contact transformations are used as a fundamental device The microfunction theory together with the quantized contact transformation theory constitutes a valuable new viewpoint in linear partial differential equations Originally published in 1986 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Algebraic Analysis of Differential Equations T. Aoki, H. Majima, Y. Takei, N. Tose, 2009-03-15 This volume contains 23 articles on algebraic analysis of differential equations and related topics most of which were presented as papers at the conference Algebraic Analysis of Differential Equations from Microlocal Analysis to Exponential Asymptotics at Kyoto University in 2005 This volume is dedicated to Professor Takahiro Kawai who is one of the creators of microlocal analysis and who introduced the technique of microlocal analysis into exponential asymptotics

Algebraic Analysis Masaki Kashiwara, Takahiro Kawai, 2014-05-10 Algebraic Analysis Papers Dedicated to Professor Mikio Sato on the Occasion of his 60th Birthday Volume I is a collection of research papers on algebraic analysis and related topics in honor to Professor Mikio Sato s 60th birthday This volume is composed of 35 chapters and begins with papers concerning Sato s early career in algebraic analysis The succeeding chapters deal with research works on the existence of local holomorphic solutions the holonomic q difference systems partial differential equations and the properties of solvable models Other chapters explore the fundamentals of hypergeometric functions the Toda lattice in the complex domain the Lie algebras b functions p adic integrals analytic parameters of hyperfunctions and some applications of microlocal energy methods to analytic hypoellipticity This volume also presents studies on the complex powers of p adic fields operational calculus extensions of microfunction sheaves up to the boundary and the irregularity of holonomic modules The last chapters feature research works on error analysis of quadrature formulas obtained by variable transformation and the analytic functional on the complex light cone as well as their Fourier Borel transformations This book will prove useful to mathematicians and advance

mathematics students Algebraic Analysis George Albert Wentworth, James Alexander McLellan, John Cadenhead Glashan, 1889 **Foundations of Algebraic Analysis (PMS-37), Volume 37** Masaki Kashiwara, Takahiro Kawai, Tatsuo Kimura, 2017-03-14 The use of algebraic methods for studying analysts is an important theme in modern mathematics The most significant development in this field is microlocal analysis that is the local study of differential equations on cotangent bundles This treatise provides a thorough description of microlocal analysis starting from its foundations The book begins with the definition of a hyperfunction It then carefully develops the microfunction theory and its applications to differential equations and theoretical physics It also provides a description of microdifferential equations the microlocalization of linear differential equations Finally the authors present the structure theorems for systems of microdifferential equations where the quantized contact transformations are used as a fundamental device The microfunction theory together with the quantized contact transformation theory constitutes a valuable new viewpoint in linear partial differential equations Originally published in 1986 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Algebraic Analysis of Social Networks* J. Antonio R. Ostoic, 2021-02-17 Presented in a comprehensive manner this book provides a comprehensive foundation in algebraic approaches for the analysis of different types of social networks such as multiple signed and affiliation networks The study of such configurations corresponds to the structural analysis within the social sciences and the methods applied for the analysis are in the areas of abstract algebra combinatorics and graph theory Current research in social networks has moved toward the examination of more realistic but also more complex social relations by which agents or actors are connected in multiple ways Addressing this trend this book offers hands on training of the algebraic procedures presented along with the computer package multiplex written by the book s author specifically to perform analyses of multiple social networks An introductory section on both complex networks and for R will feature however the subjects themselves correspond to advanced courses on social network analysis with the specialization on algebraic models and methods Functor Categories, Model Theory, Algebraic Analysis and Constructive Methods Alexander Martsinkovsky, 2024-05-04 This volume comprises selected contributions by the participants of the second Functor Categories Model Theory Algebraic Analysis and Constructive Methods conference which took place at the University of Almer a Spain in July 2022 The conference was devoted to several seemingly unrelated fields functor categories model theory of modules algebraic analysis including linear control systems and constructive category theory to mention just a few The fact that these fields are actually related is a very recent realization The connections between these disciplines are changing in real time and the goal of this volume is to provide an

initial reference point for this emerging interdisciplinary field Besides research articles the volume includes two extended lectures one on constructive methods in algebraic analysis and the other on the functorial approach to algebraic systems theory Hence in addition to its interest for researchers the volume will also be an invaluable resource for newcomers

Algebraic Analysis of Solvable Lattice Models Michio Jimbo, Tetsuji Miwa, 1995 Based on the NSF CBMS Regional Conference lectures presented by Miwa in June 1993 this book surveys recent developments in the interplay between solvable lattice models in statistical mechanics and representation theory of quantum affine algebras Because results in this subject were scattered in the literature this book fills the need for a systematic account focusing attention on fundamentals without assuming prior knowledge about lattice models or representation theory After a brief account of basic principles in statistical mechanics the authors discuss the standard subjects concerning solvable lattice models in statistical mechanics the main examples being the spin $1/2$ XXZ chain and the six vertex model The book goes on to introduce the main objects of study the corner transfer matrices and the vertex operators and discusses some of their aspects from the viewpoint of physics Once the physical motivations are in place the authors return to the mathematics covering the Frenkel-Jing bosonization of a certain module formulas for the vertex operators using bosons the role of representation theory and correlation functions and form factors The limit of the XXX model is briefly discussed and the book closes with a discussion of other types of models and related works

Fundamentals of Algebraic Microlocal Analysis Goro Kato, Daniele C Struppa, 2020-08-11 Provides a thorough introduction to the algebraic theory of systems of differential equations as developed by the Japanese school of M Sato and his colleagues Features a complete review of hyperfunction microfunction theory and the theory of D modules Strikes the perfect balance between analytic and algebraic aspects
