Mathematical Surveys and Monographs, 1984 *Basic Algebra and Geometry for Scientists and Engineers* Alan John Ellis, 1982 **Topics in Algebraic Geometry and Geometric Modeling** Ron Goldman, Rimvydas Krasauskas, 2003

Algebraic geometry and geometric modeling both deal with curves and surfaces generated by polynomial equations Algebraic geometry investigates the theoretical properties of polynomial curves and surfaces geometric modeling uses polynomial piecewise polynomial and rational curves and surfaces to build computer models of mechanical components and assemblies for industrial design and manufacture The NSF sponsored the four day Vilnius Workshop on Algebraic Geometry and Geometric Modeling which brought together some of the top experts in the two research communities to examine a wide range of topics of interest to both fields This volume is an outgrowth of that workshop Included are surveys tutorials and research papers In addition the editors have included a translation of Minding's 1841 paper On the determination of the degree of an equation obtained by elimination which foreshadows the modern application of mixed volumes in algebraic geometry The volume is suitable for mathematicians computer scientists and engineers interested in applications of algebraic geometry to geometric modeling **The Legacy of Alladi Ramakrishnan in the Mathematical Sciences** Krishnaswami

Alladi, John R. Klauder, Calyampudi R. Rao, 2010-08-26 Alladi Ramakrishnan 1923 2008 was an eminent scientist who had a wide range of research interests in theoretical and mathematical physics Professor Ramakrishnan made significant contributions to probability and statistics elementary particle physics cosmic rays and astrophysics matrix theory and the special theory of relativity Ramakrishnan believed strongly that in addition to doing fundamental research one must contribute to the advancement of the profession Inspired by his visit to the Institute for Advanced Study in Princeton in 1957 1958 he returned to Madras and began the Theoretical Physics Seminar at his family home Ekamra Nivas These seminars were ultimately responsible for the creation of MATSCIENCE The Institute of Mathematical Sciences in 1962 This institute of which he was the Director for its first 21 years has grown steadily in size and stature and is his monumental contribution to the profession In a distinguished scientific life that has spanned more than five decades Professor Ramakrishnan has come into close contact with and was influenced by several eminent mathematicians and physicists and has moulded the careers of his

several students and young researchers This volume which is a tribute to his great legacy not only deals with his significant contributions to research and the profession but also contains a new collection of research and survey papers by leading physicists and mathematicians that cover a broad range of areas in the mathematical sciences

Mathematics of Surfaces XII Ralph Martin, 2007-08-22 This book constitutes the refereed proceedings of the 12th IMA International Conference on the Mathematics of Surfaces held in Sheffield UK in September 2007 The 22 revised full papers presented together with 8 invited papers were carefully reviewed and selected from numerous submissions Among the topics addressed is the applicability of various aspects of mathematics to engineering and computer science especially in domains such as computer aided design computer vision and computer graphics The papers cover a range of ideas from underlying theoretical tools to industrial uses of surfaces Research is reported on theoretical aspects of surfaces including topology parameterization differential geometry and conformal geometry and also more practical topics such as geometric tolerances computing shape from shading and medial axes for industrial applications Other specific areas of interest include subdivision schemes solutions of differential equations on surfaces knot insertion surface segmentation surface deformation and surface fitting

The Concise Handbook of Algebra Alexander V. Mikhalev, G.F. Pilz, 2013-06-29 It is by no means clear what comprises the heart or core of algebra the part of algebra which every algebraist should know Hence we feel that a book on our heart might be useful We have tried to catch this heart in a collection of about 150 short sections written by leading algebraists in these areas These sections are organized in 9 chapters A B I Of course the selection is partly based on personal preferences and we ask you for your understanding if some selections do not meet your taste for unknown reasons we only had problems in the chapter Groups to get enough articles in time We hope that this book sets up a standard of what all algebraists are supposed to know in their chapters interested people from other areas should be able to get a quick idea about the area So the target group consists of anyone interested in algebra from graduate students to established researchers including those who want to obtain a quick overview or a better understanding of our selected topics The prerequisites are something like the contents of standard textbooks on higher algebra This book should also enable the reader to read the big Handbook Hazewinkel 1999 and other handbooks In case of multiple authors the authors are listed alphabetically so their order has nothing to do with the amounts of their contributions

The Classification of the Finite Simple Groups, Number 4 Daniel Gorenstein, Richard Lyons, Ronald Solomon, 1999

The Ergodic Theory via Joinings Eli Glasner, 2015-01-09 This book introduces modern ergodic theory It emphasizes a new approach that relies on the technique of joining two or more dynamical systems This approach has proved to be fruitful in many recent works and this is the first time that the entire theory is presented from a joining perspective Another new feature of the book is the presentation of basic definitions of ergodic theory in terms of the Koopman unitary representation associated with a dynamical system and the invariant mean on matrix coefficients which exists for any acting groups amenable or not Accordingly the first part of the

book treats the ergodic theory for an action of an arbitrary countable group The second part which deals with entropy theory is confined for the sake of simplicity to the classical case of a single measure preserving transformation on a Lebesgue probability space
