Allergic Contact Dermatitis To Simple Chemicals A Molecular Approach:

Allergic Contact Dermatitis to Simple Chemicals Gilles Dupuis, *Allergic Contact Dermatitis to Simple Chemicals* Gilles Dupuis, Claude Benezra, 1982 **Immune Mechanisms in Allergic Contact Dermatitis** Andrea Cavani, 2005-01-10

This book presents an overview of the pathogenesis of allergic contact dermatitis ACD It explains the characterization of T cell subsets which modulate immune reaction to chemicals and may represent a formidable tool for new therapeutic approaches to ACD and other T cell mediated skin disorders *Textbook of Contact Dermatitis* R.J.G. Rycroft, Torkil Menne, Peter J. Frosch, Claude Benezra, 2013-12-01 Ideally every patient with eczema should be patch tested and the importance of this investigation is now universally accepted The simplicity of the technique belies its many pitfalls the greatest being to lack the knowledge required to select the correct allergens and to interpret the results The introduction nearly 20 years ago of the journal *Contact Dermatitis* greatly stimulated the reporting of the clinical side of contact dermatitis but a vast amount of laboratory work has also been published in other journals on the mechanisms and theory of these reactions The literature on the subject is now quite vast and a comprehensive book on the clinical and research aspects of contact dermatitis has been sorely needed This textbook was carefully planned to gather together what is known of the subject into a cohesive whole and it has succeeded admirably It consists of 22 chapters written by 41 contributors each selected for their special study of particular subjects Every feature of contact dermatitis has been covered beginning with its history and even concluding with the names and addresses of those worldwide who have a specific interest in the subject The text is illustrated and well laid out it has been broken up into clearly demarcated sections making it easy to read and its information readily accessible One's own writing concentrates the mind but editing the texts of authors from so many different countries was a task of considerable proportions **Textbook of Contact Dermatitis** Richard J.G. Rycroft, Torkil Menne, Peter J. Frosch, 2013-04-17 10 1 1 1 The Purpose of Patch Testing Patch testing is a well established method of diagnosing allergic contact dermatitis a delayed type of hypersensitivity type IV reaction Patients with a history and clinical picture of contact dermatitis are reexposed to the suspected allergens under controlled conditions to verify the diagnosis Besides testing patients with hand arm face or leg eczema stasis dermatitis testing of other types of eczema atopic seborrheic dermatitis nummular eczema is sometimes indicated especially when the dermatologist suspects contact allergy to prescribed topical medicaments and their vehicles Apart from its use to confirm a suspected allergic contact dermatitis the patch test procedure can also be used before recommending alternative corticosteroids skin care products cosmetics gloves etc in a particular patient If the patient does not react to the alternatives tested it is very unlikely that she or he will react to the products in ordinary use 10 1 1 2 Standardization The first patch tests according to present principles were carried out in 1895 1 but were preceded by some preliminary experiments 2 see Chap 1 OECD Guidelines for the Testing of Chemicals, Section 4 Test No. 442C: In Chemico Skin Sensitisation Assays addressing the Adverse Outcome Pathway key event on

covalent binding to proteins OECD,2025-06-25 The present Key Event based Test Guideline addresses the human health hazard endpoint skin sensitisation following exposure to a test chemical Skin sensitisation refers to an allergic response following skin contact with the tested chemical as defined by the United Nations Globally Harmonized System of Classification and Labelling of Chemicals UN GHS This Test Guideline is proposed to address the Molecular Initiating Event leading to skin sensitisation namely protein reactivity by quantifying the reactivity of test chemicals towards model synthetic peptides or amino acid derivatives containing either lysine or cysteine This Test Guideline provides three in chemico test methods addressing the same Key Event on the Adverse Outcome Pathway for Skin Sensitisation i the Direct Peptide Reactivity Assay DPRA ii the Amino Acid Derivative Reactivity Assay ADRA and iii the kinetic Direct Peptide Reactivity Assay kDPRA The DPRA and ADRA are used for supporting the discrimination between skin sensitisers and non sensitisers in accordance with the UN GHS In contrast the kDPRA allows discrimination of UN GHS subcategory 1A skin sensitisers from those not categorised as subcategory 1A i e subcategory 1B or no category but does not allow to distinguish sensitisers from non sensitisers

Toxicology of Contact Hypersensitivity Ian Kimber,Thomas Maurer,1996-02-07 An analysis of allergic contact dermatitis a common occupational health problem affecting between 5 15% of the workforce This book considers the condition from the perspective of the toxicologist rather than the dermatologist
