An Algebra Primer Ronald D. Ferguson, Raymond W. Tebbetts, Kenneth D. Reeves, 1975 *Basic Algebra* Clara Wajngurt, 2017-08-04 **An Algebra Primer** Mark Phillips, Dr., 2014-07-10 An Algebra Primer What You Need to Know BEFORE You Can Solve for X covers the most basic concepts necessary for an understanding of algebra When students have trouble with algebra it is usually because they don't understand these most basic concepts As stated in Chapter 1 Learning a new type of mathematics is a little like learning a new language First you need to familiarize yourself with the special signs symbols and terms that make up that language Includes Terms and Symbols You Need to Know Combining Like Terms Multiplying Terms Multiplying Expressions Division Factoring **A Primer on Linear Algebra** I. N. Herstein, David J. Winter, 1988-03-01 **A Primer on Scientific Programming with Python** Hans Petter Langtangen, 2016-07-28 The book serves as a first introduction to computer programming of scientific applications using the high level Python language The exposition is example and problem oriented where the applications are taken from mathematics numerical calculus statistics physics biology and finance The book teaches Matlab style and procedural programming as well as object oriented programming High school mathematics is a required background and it is advantageous to study classical and numerical one variable calculus in parallel with reading this book Besides learning how to program computers the reader will also learn how to solve mathematical problems arising in various branches of science and engineering with the aid of numerical methods and programming By blending programming mathematics and scientific applications the book lays a solid foundation for practicing computational science From the reviews Langtangen does an excellent job of introducing programming as a set of skills in problem solving He guides the reader into thinking properly about producing program logic and data structures for modeling real world problems using objects and functions and embracing the object oriented paradigm Summing Up Highly recommended F H Wild III Choice Vol 47 8 April 2010 Those of us who have learned scientific programming in Python on the streets could be a little jealous of students who have the opportunity to take a course out of Langtangen's Primer John D Cook The Mathematical Association of America September 2011 This book goes through Python in particular and programming in general via tasks that scientists will likely perform It contains valuable information for students new to scientific computing and would be the perfect bridge between an introduction to programming and an advanced course on numerical methods or computational science Alex Small IEEE CiSE Vol 14 2 March April 2012 This fourth edition is a wonderful inclusive textbook that covers pretty much everything one needs to know to go from zero to fairly sophisticated scientific programming in Python Joan Horvath Computing Reviews March 2015 *College Algebra Primer* James Bonnar, 2014-07-10 If you studied algebra years ago or you are in need of a refresher course to prepare for college level algebra College Algebra Primer will be a helpful book to you This book quickly gets the reader up to speed and in command of all the concepts needed to comfortably get started in college algebra With the help of practical examples the

reader will learn the basic idea of algebraic problem solving real numbers the real number line integer exponents monomials and polynomials factoring polynomials rational expressions radicals rational exponents complex numbers and geometry topics College Algebra Primer shows you how to solve algebraic problems in each of these areas then allows you to solve similar problems on your own at your own pace Problem sets are provided at the end of each chapter so you can measure your mastery

An Undergraduate Primer in Algebraic Geometry Ciro Ciliberto, 2021-05-05 This book consists of two parts The first is devoted to an introduction to basic concepts in algebraic geometry affine and projective varieties some of their main attributes and examples The second part is devoted to the theory of curves local properties affine and projective plane curves resolution of singularities linear equivalence of divisors and linear series Riemann Roch and Riemann Hurwitz Theorems The approach in this book is purely algebraic The main tool is commutative algebra from which the needed results are recalled in most cases with proofs The prerequisites consist of the knowledge of basics in affine and projective geometry basic algebraic concepts regarding rings modules fields linear algebra basic notions in the theory of categories and some elementary point set topology This book can be used as a textbook for an undergraduate course in algebraic geometry The users of the book are not necessarily intended to become algebraic geometers but may be interested students or researchers who want to have a first smattering in the topic The book contains several exercises in which there are more examples and parts of the theory that are not fully developed in the text Of some exercises there are solutions at the end of each chapter

Computational Algebraic Geometry Hal Schenck, 2003-10-06 The interplay between algebra and geometry is a beautiful and fun area of mathematical investigation Advances in computing and algorithms make it possible to tackle many classical problems in a down to earth and concrete fashion This opens wonderful new vistas and allows us to pose study and solve problems that were previously out of reach Suitable for graduate students the objective of this 2003 book is to bring advanced algebra to life with lots of examples The first chapters provide an introduction to commutative algebra and connections to geometry The rest of the book focuses on three active areas of contemporary algebra Homological Algebra the snake lemma long exact sequence in homology functors and derived functors Tor and Ext and double complexes Algebraic Combinatorics and Algebraic Topology simplicial complexes and simplicial homology Stanley Reisner rings upper bound theorem and polytopes and Algebraic Geometry points and curves in projective space Riemann Roch Čech cohomology regularity

Algebraic Statistics Seth Sullivant, 2023-11-17 Algebraic statistics uses tools from algebraic geometry commutative algebra combinatorics and their computational sides to address problems in statistics and its applications The starting point for this connection is the observation that many statistical models are semialgebraic sets The algebra statistics connection is now over twenty years old and this book presents the first broad introductory treatment of the subject Along with background material in probability algebra and statistics this book covers a range of topics in algebraic statistics including algebraic exponential families likelihood inference Fisher's exact test bounds on entries of contingency tables

design of experiments identifiability of hidden variable models phylogenetic models and model selection With numerous examples references and over 150 exercises this book is suitable for both classroom use and independent study

Exploring physics with Geometric Algebra Peeter Joot, This is an exploratory collection of notes containing worked examples of a number of applications of Geometric Algebra GA also known as Clifford Algebra This writing is focused on undergraduate level physics concepts with a target audience of somebody with an undergraduate engineering background i e me at the time of writing These notes are more journal than book You ll find lots of duplication since I reworked some topics from scratch a number of times In many places I was attempting to learn both the basic physics concepts as well as playing with how to express many of those concepts using GA formalisms The page count proves that I did a very poor job of weeding out all the duplication These notes are disorganized into the following chapters Basics and Geometry This chapter covers a hodge podge collection of topics including GA forms for traditional vector identities Quaternions Cauchy equations Legendre polynomials wedge product representation of a plane bivector and trivector geometry torque and more A couple attempts at producing an introduction to GA concepts are included none of which I was ever happy with Projection Here the concept of reciprocal frame vectors using GA and traditional matrix formalisms is developed Projection rejection and Moore Penrose generalized inverse operations are discussed Rotation GA Rotors Euler angles spherical coordinates blade exponentials rotation generators and infinitesimal rotations are all examined from a GA point of view Calculus Here GA equivalents for a number of vector calculus relations are developed spherical and hyperspherical volume parameterizations are derived some questions about the structure of divergence and curl are examined and tangent planes and normals in 3 and 4 dimensions are examined Wrapping up this chapter is a complete GA formulation of the general Stokes theorem for curvilinear coordinates in Euclidean or non Euclidean spaces is developed General Physics This chapter introduces a bivector form of angular momentum instead of a cross product examines the components of radial velocity and acceleration kinetic energy symplectic structure Newton s method and a center of mass problem for a toroidal segment Relativity This is a fairly incoherent chapter including an attempt to develop the Lorentz transformation by requiring wave equation invariance Lorentz transformation of the four vector STA gradient and a look at the relativistic doppler equation Electrodynamics The GA formulation of Maxwell s equation singular in GA is developed here Various basic topics of electrodynamics are examined using the GA toolbox including the Biot Savart law the covariant form for Maxwell s equation Space Time Algebra or STA four vectors and potentials gauge invariance TEM waves and some Lienard Wiechert problems Lorentz Force Here the GA form of the Lorentz force equation and its relation to the usual vectorial representation is explored This includes some application of boosts to the force equation to examine how it transforms under observe dependent conditions Electrodynamic stress energy This chapter explores concepts of electrodynamic energy and momentum density and the GA representation of the Poynting vector and the stress energy tensors Quantum Mechanics This chapter includes a look at the Dirac Lagrangian and how this

can be cast into GA form Properties of the Pauli and Dirac bases are explored and how various matrix operations map onto their GA equivalents A bivector form for the angular momentum operator is examined A multivector form for the first few spherical harmonic eigenfunctions is developed A multivector factorization of the three and four dimensional Laplacian and the angular momentum operators are derived Fourier treatments Solutions to various PDE equations are attempted using Fourier series and transforms Much of this chapter was exploring Fourier solutions to the GA form of Maxwell s equation but a few other non geometric algebra Fourier problems were also tackled
