

INCS Method

- The Iterative Nonlinear Contrast Source method is based on the Westervelt equation:

$$c_0^{-2} \partial_t^2 p - \nabla^2 p = S + \frac{\beta}{\rho_0 c_0^4} \partial_t^2 p^2$$

- The source term S may excite a velocity or pressure jump at $z=0$:
 $S = \rho_0 \partial_t [\Delta V \delta(z)]$
 $S = -\partial_z [\Delta P \delta(z)]$

- The nonlinear term is interpreted as a *contrast source* $S^N(p)$

$$c_0^{-2} \partial_t^2 p - \nabla^2 p = S + S^N(p) \quad S^N(p) = \frac{\beta}{\rho_0 c_0^4} \partial_t^2 p^2$$

- The acoustic pressure may be obtained as a convolution of the source with the free space Green's function:

$$p = G *_{\mathbf{x},t} [S + S^N(p)] \quad G(\mathbf{x}, t) = \frac{\delta(t - \|\mathbf{x}\| / c_0)}{4\pi \|\mathbf{x}\|}$$

Algebraic and Spectral Methods for Nonlinear Wave Equations Naruyoshi Asano,Yūsuke Kato,1990 **Nonlinear Wave Equations** Satyanad Kichenassamy,2021-05-30 This work examines the mathematical aspects of nonlinear wave propagation emphasizing nonlinear hyperbolic problems It introduces the tools that are most effective for exploring the problems of local and global existence singularity formation and large time behaviour of solutions and for the study of perturbation methods **Algebraic and Spectral Methods for Nonlinear Wave Equations** Naruyoshi Asano,Y. comprehensive account of the variety of approaches to such an important and complex concept as Integrability Developing mathematical models physicists often raise the following questions whether the model obtained is integrable or close in some sense to an integrable one and whether it can be studied in depth analytically In this book we have tried to create a mathematical framework to address these issues and we give descriptions of methods and review results In the Introduction we give a historical account of the birth and development of the theory of integrable equations focusing on the main issue of the book the concept of integrability itself A universal definition of Integrability is proving to be elusive despite more than 40 years of its development Often such notions as solvability or regular behaviour of solutions are associated with integrable systems Unfortunately these notions do not lead to any rigorous mathematical definition A constructive approach could be based upon the study of hidden and rich algebraic or analytic structures associated with integrable equations The requirement of existence of elements of these structures could in principle be taken as a definition for integrability It is astonishing that the final result is not sensitive to the choice of the structure taken eventually we arrive at the same pattern of equations
