Short answer questions

Given the matrix equation $AX = B$, where A is a coefficient matrix, X is a column vector of variables, and B is a column vector of constants, solve for X and explain each step of your solution

$$\begin{bmatrix} 2 & -1 & 0 \\ 1 & 4 & 0 \\ -3 & 2 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 7 \\ 6 \\ -1 \end{bmatrix}$$

1. Begin by expressing the given system as a matrix equation. Write down the matrix equation $AX = B$.
2. Perform the necessary row operations to transform the augmented matrix $[AB]$ into row-echelon form. Show each step clearly.
3. Continue the row operations to achieve reduced row-echelon form. Be explicit about each operation and its effect on the system.
4. Write down the solution for X from the reduced row-echelon form. Check the solution.

Solved example

Let's find the inverse of matrix A .

$$A = \begin{bmatrix} 2 & -1 & 0 \\ 1 & 4 & 0 \\ -3 & 2 & 1 \end{bmatrix}$$
$$adj(A) = \begin{bmatrix} 4 & -2 & 0 \\ 1 & -2 & 0 \\ -4 & 3 & 1 \end{bmatrix}$$
$$A^{-1} = \frac{1}{|A|} adj(A) = \frac{1}{-2} \begin{bmatrix} 4 & -2 & 0 \\ 1 & -2 & 0 \\ -4 & 3 & 1 \end{bmatrix} = \begin{bmatrix} -2 & 1 & 0 \\ 0.5 & -1 & 0 \\ 2 & -1.5 & -0.5 \end{bmatrix}$$

So the solution is $x = 1, y = 2, z = 0$

Algebraic Structures and Operator Calculus P. Feinsilver, René Schott, 2012-12-06 This series presents some tools of applied mathematics in the areas of probability theory operator calculus representation theory and special functions used currently and we expect more and more in the future for solving problems in mathematics physics and now computer science Much of the material is scattered throughout available literature however we have nowhere found in accessible form all of this material collected The presentation of the material is original with the authors The presentation of probability theory in connection with group representations is new this appears in Volume I Then the applications to computer science in Volume II are original as well The approach found in Volume III which deals in large part with infinite dimensional representations of Lie algebras Lie groups is new as well being inspired by the desire to find a recursive method for calculating group representations One idea behind this is the possibility of symbolic computation of the matrix elements In this volume Representations and Probability Theory we present an introduction to Lie algebras and Lie groups emphasizing the connections with operator calculus which we interpret through representations principally the action of the Lie algebras on spaces of polynomials The main features are the connection with probability theory via moment systems and the connection with the classical elementary distributions via representation theory The various systems of polynomials that arise are one of the most interesting aspects of this study
