

ALGEBRAIC NUMBER THEORY

LECTURE 4 SUPPLEMENTARY NOTES

Material covered: Sections 2.6 through 2.9 of textbook.

I followed the book pretty closely in this lecture, so only a few comments.

Wherever Samuel states a theorem with the assumption that a field has characteristic zero or is finite, we can generalize to the field being perfect.

1. SECTION 2.6

To compute the determinant of the matrix

$$\begin{pmatrix} X & 0 & \cdots & a_0 \\ -1 & X & \cdots & a_1 \\ \cdots & -1 & X & a_{n-2} \\ \cdots & 0 & -1 & X + a_{n-1} \end{pmatrix}$$

first add X times the bottom row to the second last row, then X times the second last row to the third last, and so on. We get

$$\begin{pmatrix} 0 & 0 & \cdots & X^n + a_{n-1}X + \cdots + a_1X + a_0 \\ -1 & 0 & \cdots & X^{n-1} + a_{n-1}X^{n-2} + \cdots + a_1 \\ \cdots & -1 & 0 & X^2 + a_{n-1}X + a_{n-2} \\ \cdots & 0 & -1 & X + a_{n-1} \end{pmatrix}$$

Now Laplace expand along the first column, and so on, to get that the determinant is $f(X)$, the minimal polynomial of x , which is the top right entry of the above matrix.

Example. Suppose $A \subset B \subset C$ are rings, such that B is a free module over A and C is a free module over B . Let $x \in C$. Show that

$$\text{charpoly}_{B[X]/A[X]} \text{charpoly}_{C/B}(x) = \text{charpoly}_{C/A}(x)$$

Note that this is using that $B[X]$ is a free $A[X]$ module. In particular, check that this implies that traces and norms of elements are transitive.

2. APPENDIX: THE FUNDAMENTAL THEOREM OF ALGEBRA

Let's see a slightly different proof from that in the book (it's from Grillet's Abstract Algebra).

Modern Algebra and the Rise of Mathematical Structures Leo Corry,2012-12-06 The book describes two stages in the historical development of the notion of mathematical structures first it traces its rise in the context of algebra from the mid nineteenth century to its consolidation by 1930 and then it considers several attempts to formulate elaborate theories after 1930 aimed at elucidating from a purely mathematical perspective the precise meaning of this idea First published in the series Science Networks Historical Studies Vol 17 1996 In the second rev edition the author has eliminated misprints revised the chapter on Richard Dedekind and updated the bibliographical index **Explorations in Number Theory** Cam

McLeman,Erin McNicholas,Colin Starr,2022-12-18 This innovative undergraduate textbook approaches number theory through the lens of abstract algebra Written in an engaging and whimsical style this text will introduce students to rings groups fields and other algebraic structures as they discover the key concepts of elementary number theory Inquiry based learning IBL appears throughout the chapters allowing students to develop insights for upcoming sections while simultaneously strengthening their understanding of previously covered topics The text is organized around three core themes the notion of what a number is and the premise that it takes familiarity with a large variety of number systems to fully explore number theory the use of Diophantine equations as catalysts for introducing and developing structural ideas and the role of abstract algebra in number theory in particular the extent to which it provides the Fundamental Theorem of Arithmetic for various new number systems Other aspects of modern number theory including the study of elliptic curves the analogs between integer and polynomial arithmetic p adic arithmetic and relationships between the spectra of primes in various rings are included in smaller but persistent threads woven through chapters and exercise sets Each chapter concludes with exercises organized in four categories Calculations and Informal Proofs Formal Proofs Computation and Experimentation and General Number Theory Awareness IBL Exploration worksheets appear in many sections some of which involve numerical investigations To assist students who may not have experience with programming languages Python worksheets are available on the book s website The final chapter provides five additional IBL explorations that reinforce and expand what students have learned and can be used as starting points for independent projects The topics covered in these explorations are public key cryptography Lagrange s four square theorem units and Pell s Equation various cases of the solution to Fermat s Last Theorem and a peek into other deeper mysteries of algebraic number theory Students should have a basic familiarity with complex numbers matrix algebra vector spaces and proof techniques as well as a spirit of adventure to explore the numbertverse **Algebraic structures and number theory.
