Algorithmic Graph Theory And Perfect Graphs Vol 57 Annals Of Discrete Mathematics:

Algorithmic Graph Theory and Perfect Graphs Martin Charles Golumbic, 2014-05-10 Algorithmic Graph Theory and Perfect Graphs provides an introduction to graph theory through practical problems This book presents the mathematical and algorithmic properties of special classes of perfect graphs Organized into 12 chapters this book begins with an overview of the graph theoretic notions and the algorithmic design This text then examines the complexity analysis of computer algorithm and explains the differences between computability and computational complexity Other chapters consider the parameters and properties of a perfect graph and explore the class of perfect graphs known as comparability graph or transitively orientable graphs This book discusses as well the two characterizations of triangulated graphs one algorithmic and the other graph theoretic The final chapter deals with the method of performing Gaussian elimination on a sparse matrix wherein an arbitrary choice of pivots may result in the filling of some zero positions with nonzeros This book is a valuable resource for mathematicians and computer scientists

The Zeroth Book of Graph Theory Martin Charles Golumbic, André Sainte-Laguë, 2021-02-09 Marking 94 years since its first appearance this book provides an annotated translation of Sainte Lagu s seminal monograph *Les r seaux ou graphes* drawing attention to its fundamental principles and ideas Sainte Lagu s 1926 monograph appeared only in French but in the 1990s H Gropp published a number of English papers describing several aspects of the book He expressed his hope that an English translation might sometime be available to the mathematics community In the 10 years following the appearance of *Les r seaux ou graphes* the development of graph theory continued culminating in the publication of the first full book on the theory of finite and infinite graphs in 1936 by D nes K nig This remained the only well known text until Claude Berge s 1958 book on the theory and applications of graphs By 1960 graph theory had emerged as a significant mathematical discipline of its own This book will be of interest to graph theorists and mathematical historians

Frontiers in Algorithmics Xiaotie Deng, John E. Hopcroft, Jinyun Xue, 2009-06-20 This book constitutes the refereed proceedings of the Third International Frontiers of Algorithmics Workshop FAW 2009 held in Hefei Anhui China in June 2009 The 33 revised full papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 87 submissions The papers are organized in topical sections on graph algorithms game theory with applications graph theory computational geometry machine learning parameterized algorithms heuristics and analysis approximation algorithms as well as pattern recognition algorithms large scale data mining

Words and Graphs Sergey Kitaev, Vadim Lozin, 2015-11-18 This is the first comprehensive introduction to the theory of word representable graphs a generalization of several classical classes of graphs and a new topic in discrete mathematics After extensive introductory chapters that explain the context and consolidate the state of the art in this field including a chapter on hereditary classes of graphs the authors suggest a variety of problems and directions for further research and they discuss interrelations of words and graphs in the literature by means other than word representability The book is self contained and is suitable for both

reference and learning with many chapters containing exercises and solutions to selected problems. It will be valuable for researchers and graduate and advanced undergraduate students in discrete mathematics and theoretical computer science in particular those engaged with graph theory and combinatorics and also for specialists in algebra.

Frontiers in Algorithmics Jianxin Wang, Chee Yap, 2015-06-26 This book constitutes the proceedings of the 9th International Workshop on Frontiers in Algorithmics FAW 2015 held in Guilin China in July 2015. The 28 papers presented in this volume were carefully reviewed and selected from 65 submissions. They deal with graph algorithms, approximation algorithms, combinatorial optimization, parameterized algorithms and online algorithms.

The 34 revised full papers presented were carefully reviewed and selected from 61 submissions. The book also includes two abstracts. The papers cover a wide range of topics in graph theory related to computer science such as structural graph theory with algorithmic or complexity applications, design and analysis of sequential, parallel, randomized, parameterized and distributed graph and network algorithms, computational complexity of graph and network problems, computational geometry, graph grammars, graph rewriting systems and graph modeling, graph drawing and layouts, random graphs and models of the web and scale free networks and support of these concepts by suitable implementations and applications.

Cooperative Design, Visualization, and Engineering Yuhua Luo, 2013-08-30 This book constitutes the refereed proceedings of the 10th International Conference on Cooperative Design, Visualization and Engineering CDVE 2013 held in Palma de Mallorca Spain in September 2013. The 34 revised full papers presented were carefully reviewed and selected from numerous submissions. The papers cover all the topics of cooperative engineering: basic theories, methods and technologies that support CDVE, cooperative design, visualization and applications. There are special contributions dealing with the cooperative issues brought by the Internet of things such as the situation in the ambient assisted living systems. Other papers in the volume cover a wide range of cooperative application topics such as cooperative e-learning, cooperative decision making and cooperative simulation etc.

Structural Information and Communication Complexity Thomas Moscibroda, Adele A. Rescigno, 2013-11-09 This book constitutes the thoroughly refereed post-conference proceedings of the 20th International Colloquium on Structural Information and Communication Complexity SIROCCO 2013 held in Ischia Italy in July 2013. The 28 revised full papers presented were carefully reviewed and selected from 67 submissions. SIROCCO is devoted to the study of communication and knowledge in distributed systems. Special emphasis is given to innovative approaches and fundamental understanding in addition to efforts to optimize current designs. The typical areas include distributed computing, communication networks, game theory, parallel computing, social networks, mobile computing including autonomous robots, peer-to-peer systems, communication complexity, fault-tolerant graph theories and randomized probabilistic issues in
