Civilized Life in the Universe George Basalla, 2006-01-19 From Plutarch and Kepler to Stephen Hawking and Carl Sagan this book offers a fascinating history of scientific speculation about life in outer space Basalla traces an unbroken but twisting chain of ideas passed from one scientist to the next and from science to popular culture He even examines the influence of popular culture on science Sagan always admitted how much Burroughs Martian novels influenced his speculations about Mars Throughout Basalla shows that scientific belief in and search for extraterrestrial civilizations is a complex impulse part secularized religious and part anthropomorphic

Aliens Like Us? Anthony Aveni, 2025-03-18 In this authoritative accessible and at times funny and irreverent work distinguished anthropologist Anthony Aveni speaks to the trained astrophysicist and the curious layperson alike about a simple but previously unexplored question Why do we assume aliens if they are really out there behave just like us Avenis newest work departs from the usual scientific treatment of extraterrestrial intelligence by probing the historical and widely neglected anthropological record which offers relevant analogous incidents of contact among terrestrial cultures Beginning with theories of the evolution of life and culture advocated by astrobiologists *Aliens Like Us* explores how the Western cultural imagination is influenced by ways of knowing that are deeply embedded in the minds of the questioners for example how we consider the ownership of property the idea of progress and even the way we classify things The lessons of anthropology offer not only value structures from other cultures that differ profoundly from our own but also testify to the diverse ways in which alien cultures interact Finally on the question of potential first contact Aveni closes with a fascinating exploration of the image of extraterrestrials in popular culture that is derived in part from the hugely influential realm of science fiction

Alien Arrival Michael Fitzgerald, 2015-02-28 Aliens are among us already and their activities have increased enormously with the arrival of the new millennium Journey with the author as he examines human extraterrestrial interaction from ancient times to the present Sightings contact and abduction cases are all considered as well as a detailed study of the evidence for life on other planets especially on Mars and the Moon Become part of the search for extraterrestrial life and attempts to communicate with it Explore the coverups and conspiracies doomsday scenarios and the possibility that the increase in UFO activity represents an attempt by extraterrestrials to encourage us to change direction and work together for the salvation of our planet Or is there a much more sinister plan afoot Prediction By the year 2030 we will have definite proof of the existence of intelligent life on other planets Mysteries beckon

Mind and the Cosmic Order Charles Pinter, 2020-11-04 The topic of this book is the relationship between mind and the physical world From once being an esoteric question of philosophy this subject has become a central topic in the foundations of quantum physics The book traces this story back to Descartes through Kant to the beginnings of 20th Century physics where it becomes clear that the mind world relationship is not a speculative question but has a direct impact on the understanding of physical phenomena The books argument begins with the British empiricists who raised our awareness of the fact that we have no direct contact with physical reality but it is the mind that constructs the form and features of objects It is shown that modern cognitive science brings this insight a step further by suggesting that shape and structure are not internal to objects but arise in the observer The author goes yet further by arguing that the

meaningful connectedness between things the hierarchical organization of all we perceive is the result of the Gestalt nature of perception and thought and exists only as a property of mind These insights give the first glimmerings of a new way of seeing the cosmos not as a mineral wasteland but a place inhabited by creatures

God, Faith and the New Millennium
 Keith Ward, 2014-10-01 Does being a Christian in the modern scientific age require intellectual suicide What future for Christianity in the Third Millennium In God Faith and the New Millennium Keith Ward has produced a powerful and upbeat study of Christian belief that tackles questions such as these head on In what he describes as a summary of his life's work on Christianity religion and science Ward's new and positive interpretation presents a Christian faith in harmony with the scientific worldview while remaining true to its traditions This is a cutting edge study that will provoke and inspire every Christian and anyone interested in the debate on the role of faith in the modern world Through his examination of key issues such as Creation evolution and the divine purpose Ward demonstrates that there is a natural fit between the scientific worldview and mainstream Christian beliefs Christian faith gives insight into the meaning and purpose of the universe the physical structure of which modern science has marvellously discovered

Nature: A Weekly Illustrated Journal of Science, 1911 **Nature** Sir Norman Lockyer, 1911 Structure of Space and the Submicroscopic Deterministic Concept of Physics Volodymyr Krasnoholovets, 2017-07-06 This book Structure of Space and the Submicroscopic Deterministic Concept of Physics completely formalizes fundamental physics by showing that all space which consists of objects and distances arises from the same origin manifold of sets A continuously organized mathematical lattice of topological balls represents the primary substrate named the tessellattice All fundamental particles arise as local fractal deformations of the tessellattice The motion of such particulate balls through the tessellattice causes it to deform neighboring cells which generates a cloud of a new kind of spatial excitations named inertons Thus so called hidden variables introduced in the past by de Broglie Bohm and Vigier have acquired a sense of real quasiparticles of space This theory of space unambiguously answers such challenging issues as what is mass what is charge what is a photon what is the wave psi function what is a neutrino what are the nuclear forces and so on The submicroscopic concept uncovers new peculiar properties of quantum systems especially the dynamics of particles within a section equal to the particle's de Broglie wavelength which are fundamentally impossible for quantum mechanics This concept thoroughly discussed in the book allows one to study complex problems in quantum optics and quantum electrodynamics in detail to disclose an inner world of particle physics by exposing the structure of quarks and nucleons in real space and to derive gravity as the transfer of local deformations of space by inertons which in turn completely solves the problems of dark matter and dark energy Inertons have revealed themselves in a number of experiments carried out in condensed media plasma nuclear physics and astrophysics which are described in this book together with prospects for future studies in both fundamental and applied physics
