Framework Renewable Energy:

Switching to Renewable Power Volkmar Lauber, 2012 Renewable energy has enjoyed relatively good and sometimes extraordinary growth in recent years in particular photovoltaics and wind but it will be difficult to sustain such rates of diffusion on a global basis A more complete transition to renewable energy is required on a demanding timescale set by climate change and fossil fuel depletion This book analyses strategies for promoting renewable energy within the context of a rapid energy transition using case studies from different countries over the past 30 years Having described the global context in detail covering oil and gas depletion climate change third world development and the potential for renewable energy the authors evaluate support mechanisms at national and international levels offering readers a clear understanding of the regulatory framework and an opportunity to promote renewable energy effectively This book offers energy policy makers renewable energy professionals energy consultants and students a platform for development and an invaluable research text Contributing authors include Jorg Schindler and Werner Zittel Ludwig Bohlkow Systemtechnik Germany Ian Rowlands University of Waterloo Canada Giulio Volpi WWF Europe Kristian Hvitfelt Nielsen Aarhus University Denmark Staffan Jacobsson Chalmers University of Technology Sweden Peter Connor University of Warwick UK Ole Langniss Centre of Solar Energy and Hydrogen Research in Baden Wurttemberg Germany Ryan Wiser Lawrence Berkeley National Laboratory US David Elliott The Open University UK and Frede Hvelplund Aalborg University Denmark *Energy Framework and Renewable Energy Strategy* Prince Edward Island. Climate Change Chen Zhou, 2019-03-11 The book discusses climate technology transfer under the UNFCCC framework and China's relevant legislation and practices. It first explores the theoretical basis of climate change related technology transfer with a particular focus on the differences between climate technology transfer and business as usual performance. The book then reviews practices of both technology supplier and user in order to generally identify potential legal barriers and obstacles. Finally, it sheds light on China providing a comprehensive assessment on barriers that hinder the trans boundary transfers of low carbon technologies and need to be overcome in future. The issues concerned involve two of the most dynamic areas in current China's lawmaking progress: environment laws and Intellectual Property laws. The book provides an in depth analysis on China's legislation and practices in this regard. At international level, the legal framework of climate technology transfer is examined in a systematic, prudent and constructive manner. On this basis, the book highlights potential common consistency and possible coordination between the UNFCCC and the WTO regime. This book is accessible to both Chinese and international environmental law specialists. It appeals to a broad readership including environmental scientists, economists concerned with China's intellectual property law, foreign investment law, and anyone interested in the topic: how to green intellectual property rights regime for climate technology transfer in the China context.

Renewables in the Circular Economy and Business Viktor Koval, 2024-11-29 This book is an interdisciplinary study linking the circular economy and renewable energy, satisfying the public interest in sustainable energy solutions from a social, political, economic and technological perspective. The Development of a Comprehensive Legal Framework for the Promotion of Offshore Wind Power Anton Ming-Zhi Gao, Chien-Te Fan, 2016-04-24 There is clearly an urgent need worldwide to increase the share of renewable energy in the overall energy supply as rapidly as possible. With a well developed and proven feasible technology, offshore wind power has come to the fore as the most promising means of achieving this goal. However, fragmented authorities and procedures may pose tremendous challenges to the development of an integrated legal framework for offshore wind, and the complex installation and grid interconnections it requires. This book surveys and analyses the features essential for the development of such a framework, drawing on the experience of ten countries that have such schemes in place: France, Germany, the United Kingdom, Italy, Norway, the United States, Australia, China, Korea, and Taiwan. Discussing the impact of technological, economic, spatial and market issues on the legal framework, eleven key policymakers in their respective countries contribute chapters that together reveal the contours of a strong and sound legal framework that serves to enable and facilitate the efficient application of policy initiatives and subsidies. Topics and issues raised and examined include the ways a sound legal framework addresses the following aspects of offshore wind power development: license schemes, construction of turbines, infrastructure of grid, construction of harbor and vessels, environmental

health and safety regulations and loan and finance risk The contributors show that a carefully planned mix of incentives and supplementary schemes is indispensable The essays are drawn on the presentations and papers offered at the International Conference on a Comprehensive Legal Framework for the Development of Offshore Wind Power Around the World held in Taiwan in August 2016 As a major new contribution to the debate on the importance of a legal framework for offshore wind power and grid interconnections this book will prove indispensable to lawyers policymakers officials and academics concerned with the management of sea space to include the wind power necessary to achieve and sustain renewable energy goals

Regulatory Support for Off-Grid Renewable Electricity Ngozi Chinwa Ole,Eduardo G. Pereira,Peter Kayode Oniemola,Gustavo Kaercher Loureiro,2023-02-02 This book investigates the role of law in enabling and addressing the barriers to the development of off grid renewable electricity OGRE The limited development of OGRE is ascribed to a host of social economic and legal barriers including the problem of initial capital costs existing subsidies for conventional electricity and lack of technological and institutional capacity Through the analyses of selected case studies from Africa Asia Europe and North and South America this book discusses the typical barriers to the development of OGRE from a global perspective and examines the role of the law in addressing them Drawing together the lessons learnt from the case studies this book offers robust recommendations on how the development of OGRE will support the goal of achieving universal access to low carbon reliable and sustainable electricity globally This volume will be of great interest to students scholars policy makers investors and practitioners in the fields of energy law and policy climate change and renewable energy development
