Youth Entrepreneurship and Africa's Sustainable Industrialization Farai Kapfudzaruwa, Masafumi Nagao, Emmanuel Mutisya, 2018-10-18. This book investigates the prospects of Africa's sustainable industrialization with an emphasis on youth entrepreneurship and the mechanisms in place to support both industrial and corporate entrepreneurs. The volume addresses two specific issues: first, industrialization and youth entrepreneurship; and secondly, youth entrepreneurship training and education. The emphasis on youth entrepreneurship to drive sustainable industrialization in Africa is driven by three points: first, Africa's industrialization is still at its inception with severely limited existing stock of entrepreneurial talents, which makes it imperative to look to the continent's bulging youth population, the population dividend, for the needed supply of successive generations of entrepreneurs. Secondly, sustainable industrialization would have to be oriented to green ICT and inclusive growth, which calls for a change in entrepreneurs' attitudes. Finally, at the centre of the Africa Rising narrative is a budding new cheetah generation of young entrepreneurs who are highly educated, professional, and motivated by the need to set up new business models and practices to compete in the Fourth Industrial Revolution. This volume forms part of an Education for Sustainable Development in Africa (ESDA) book series involving the United Nations University Institute for the Advanced Study of Sustainability and 8 partner African universities running Master's Programs in sustainable development. The book series is intended to serve primarily as undergraduate and graduate instruction materials for courses on sustainable development in Africa, as well as policy input to key developmental issues in Africa.

Governing Technology for Sustainability Joseph Murphy, 2012. In a world of growing complexity and dwindling resources, the relationship between technology and sustainability is a pressing issue of concern at the highest levels. This book improves our understanding by examining the ways that people, technology, and governance shape each other, with implications for sustainability. It is the first book to link technology studies and governance research to this problem. Contributions from leading environmental social scientists are included, with each chapter reporting on new research and tackling complex but vital issues. Drawing on examples such as wave and tidal power, wind power, micro-generation, community waste recycling, and eco-housing, the book provides powerful new insights into the governance of technology for sustainability. A detailed introduction and conclusion discuss existing research directions and identify the contribution that the book makes in advancing our understanding of the people-technology-governance nexus and its implications for sustainability. This is essential reading for all those in academia, government, and industry working at the critical interface between how we develop, deploy, and govern technology in the pursuit of sustainability.
