Vocal Development Charles T. Snowdon, Martine Hausberger, 1997-03-20 For at least 30 years there have been close parallels between studies of birdsong development and those of the development of human language Both song and language

require species specific stimulation at a sensitive period in development and subsequent practice through subsong and plastic song in birds and babbling in infant humans leading to the development of characteristic vocalisations for each species This book illustrates how social interactions during development can shape vocal learning and extend the sensitive period beyond infancy and how social companions can induce flexibility even into adulthood Social companions in a wide range of species including birds and humans but also cetaceans and nonhuman primates play important roles in shaping vocal production as well as the comprehension and appropriate usage of vocal communication This book will be required reading for students and researchers interested in animal and human communication and its development Vocal Communication in Birds and Mammals Marc Naguib,Vincent Janik,Nicola Clayton,Klaus Zuberbuhler,2009-08-06 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume Vocal Communication in Birds and Mammals makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields **Edison Phonograph Monthly** Thomas A.
