The Algebraic Theory of Modular Systems Francis Sowerby Macaulay, 2015-06-25 Excerpt from The Algebraic Theory of Modular Systems The present state of our knowledge of the properties of Modular Systems is chiefly due to the fundamental theorems and processes of L Kronecker M Noether D Hilbert and E Lasker and above all to J Konig s profound exposition and numerous extensions of Kronecker s theory p xiii Konig s treatise might be regarded as in some measure complete if it were admitted that a problem is finished with when its solution has been reduced to a finite number of feasible operations If however the operations are too numerous or too involved to be carried out in practice the solution is only a theoretical one and its importance then lies not in itself but in the theorems with which it is associated and to which it leads Such a theoretical solution must be regarded as a preliminary and not the final stage in the consideration of the problem In the following presentment of the subject Section I is devoted to the Resultant the case of n equations being treated in a parallel

manner to that of two equations Section II contains an account of Kronecker's theory of the Resolvent following mainly the lines of König's exposition Section III on general properties is closely allied to Lasker's memoir and Dedekind's theory of Ideals and Section IV is an extension of Lasker's results founded on the methods originated by Noether The additions to the theory consist of one or two isolated theorems especially 50 53 and 79 and its consequences and the introduction of the Inverse System in Section IV About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

From the Preface THE present state of our knowledge of the properties of Modular Systems is chiefly due to the fundamental theorems and processes of L Kronecker M Noether D Hilbert and E Lasker and above all to J König's profound exposition and numerous extensions of Kronecker's theory p xiii König's treatise might be regarded as in some measure complete if it were admitted that a problem is finished with when its solution has been reduced to a finite number of feasible operations If however the operations are too numerous or too involved to be carried out in practice the solution is only a theoretical one and its importance then lies not in itself but in the theorems with which it is associated and to which it leads Such a theoretical solution must be regarded as a preliminary and not the final stage in the consideration of the problem In the following presentment of the subject Section I is devoted to the Resultant the case of equations being treated in a parallel manner to that of two equations Section II contains an account of Kronecker's theory of the Resolvent following mainly the lines of König's exposition Section III on general properties is closely allied to Lasker's memoir and Dedekind's theory of Ideals and Section IV is an extension of Lasker's results founded on the methods originated by Noether The additions to the theory consist of one or two isolated theorems especially 50 53 and 79 and its consequences and the introduction of the Inverse System in Section IV The subject is full of pitfalls I have pointed out some mistakes made by others but have no doubt that I have made new ones It may be expected that any errors will be discovered and eliminated in due course since proofs or references are given for all major and most minor statements I take this opportunity of thanking the Editors for their acceptance of this tract and the Syndics of the University Press for publishing it
