

INTERPRET MY SLOPE AND INTERCEPTS

This activity gives the students a graph with labels on each axis that represents a real-world application. The students are to compute the slope and interpret its meaning. The students can calculate the slope using the graph or the slope formula. If the students choose to use the graph, emphasize that they need to pay attention to the scale on each axis. Usually students who compute the slope using the slope formula, after identifying the coordinates of two points on the graph, make fewer mistakes. The students also are required to give the coordinates of the y-intercept and explain the meaning of this point.
