

INCS Method

- The Iterative Nonlinear Contrast Source method is based on the Westervelt equation:

$$c_0^{-2} \partial_t^2 p - \nabla^2 p = S + \frac{\beta}{\rho_0 c_0^4} \partial_t^2 p^2$$

- The source term S may excite a velocity or pressure jump at $z=0$:
 $S = \rho_0 \partial_t [\Delta V \delta(z)]$
 $S = -\partial_z [\Delta P \delta(z)]$

- The nonlinear term is interpreted as a *contrast source* $S^N(p)$

$$c_0^{-2} \partial_t^2 p - \nabla^2 p = S + S^N(p) \quad S^N(p) = \frac{\beta}{\rho_0 c_0^4} \partial_t^2 p^2$$

- The acoustic pressure may be obtained as a convolution of the source with the free space Green's function:

$$p = G *_{\mathbf{x},t} [S + S^N(p)] \quad G(\mathbf{x}, t) = \frac{\delta(t - \|\mathbf{x}\| / c_0)}{4\pi \|\mathbf{x}\|}$$

Algebraic and Spectral Methods for Nonlinear Wave Equations Naruyoshi Asano,Yūsuke Kato,1990 **Nonlinear Wave Equations** Satyanad Kichenassamy,2021-05-30 This work examines the mathematical aspects of nonlinear wave propagation emphasizing nonlinear hyperbolic problems It introduces the tools that are most effective for exploring the problems of local and global existence singularity formation and large time behaviour of solutions and for the study of perturbation methods **Algebraic and Spectral Methods for Nonlinear Wave Equations** Naruyoshi Asano,Y. Kato,1990-01-01 **The Mathematical Theory of Tone Systems** Jan Haluska,2003-12-19 The Mathematical Theory of Tone Systems patterns a unified theory defining the tone system in functional terms based on the principles and forms of uncertainty theory This title uses geometrical nets and other measures to study all classes of used and theoretical tone systems from Pythagorean tuning to superparticular pentatonics Hundreds of exa Differential Equations Marian Mureşan,2024-06-17 The book concerns with solving about 650 ordinary and partial differential equations Each equation has at least one solution and each solution has at least one coloured graph The coloured graphs reveal different features of the solutions Some graphs are dynamical as for Clairaut differential equations Thus one can study the general and the singular solutions All the equations are solved by Mathematica The first chapter contains mathematical notions and results that are used later through the book Thus the book is self contained that is an advantage for the reader The ordinary differential equations are treated in Chapters 2 to 4 while the partial differential equations are discussed in Chapters 5 to 10 The book is useful for undergraduate and graduate students for researchers in engineering physics chemistry and others Chapter 9 treats parabolic partial differential equations while Chapter 10 treats third and higher order nonlinear partial differential equations both with modern methods Chapter 10 discusses the Korteweg de Vries Dodd Bullough Mikhailov Tzitzeica Dodd Bullough Benjamin Kadomtsev Petviashvili Sawada Kotera and Kaup Kupershmidt equations **Scientific and Technical Aerospace Reports** ,1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Adaptive Method of Lines A. comprehensive account of the variety of approaches to such an important and complex concept as Integrability Developing mathematical models physicists often raise the following questions whether the model obtained is integrable or close in some sense to an integrable one and whether it can be studied in depth analytically In this book we have tried to create a mathematical framework to address these issues and we give descriptions of methods and review results In the Introduction we give a historical account of the birth and development of the theory of integrable equations focusing on the main issue of the book the concept of integrability itself A universal definition of Integrability is proving to be elusive despite more than 40 years of its development Often such notions as act solvability or regular behaviour of solutions are associated with integrable systems Unfortunately these notions do not lead to any rigorous mathematical definition A constructive approach could be based upon the study of hidden and rich algebraic or analytic structures associated with integrable equations The requirement of existence of elements of these structures could in principle be taken as a definition for integrability It is astonishing that the final result is not sensitive to the choice of the structure taken eventually we arrive at the same pattern of equations
