Algebraic Combinatorics And Computer Science A Tribute To Giancarlo Rota:

Algebraic Combinatorics and Computer Science H. Crapo, D. Senato, 2001-01-01 This book dedicated to the memory of Gian Carlo Rota is the result of a collaborative effort by his friends students and admirers Rota was one of the great thinkers of our times innovator in both mathematics and phenomenology I feel moved yet touched by a sense of sadness in presenting this volume of work despite the fear that I may be unworthy of the task that befalls me Rota both the scientist and the man was marked by a generosity that knew no bounds His ideas opened wide the horizons of fields of research permitting an astonishing number of students from all over the globe to become enthusiastically involved The contagious energy with which he demonstrated his tremendous mental capacity always proved fresh and inspiring Beyond his renown as gifted scientist what was particularly striking in Gian Carlo Rota was his ability to appreciate the diverse intellectual capacities of those before him and to adapt his communications accordingly This human sense complemented by his acute appreciation of the importance of the individual acted as a catalyst in bringing forth the very best in each one of his students Whosoever was fortunate enough to enjoy Gian Carlo Rota's longstanding friendship was most enriched by the experience both mathematically and philosophically and had occasion to appreciate son cote de bon vivant The book opens with a heartfelt piece by Henry Crapo in which he meticulously pieces together what Gian Carlo Rota's untimely demise has bequeathed to science

Algebraic Combinatorics and Computer Science H Crapo, D Senato, 2001-01-01 The present volume is a tribute to Gian Carlo Rota It is an anthology of the production of a unique collaboration among leading researchers who were greatly influenced by Gian Carlo Rota's mathematical thought The book begins with an essay in mathematical biography by H Crapo in which the prospects for research opened up by Rota's work are outlined The subsequent section is devoted to the prestigious Fubini lectures delivered by Gian Carlo Rota at the Institute for scientific Interchange in 1998 with a preface by E Vesentini These lectures provide the only published documentation of Rota's plans for a fundamental reform of probability theory a program interrupted by his untimely demise The lectures by M Aigner and D Perrin specially conceived for this volume provide self contained surveys of central topics in combinatorics and theoretical computer science they will also be of great use to both undergraduate and graduate students The essays and research papers that appear in the final section present recent developments of some of the mathematical themes promoted by Gian Carlo Rota These will be of particular interest as they propose many new problems for research

parallel and distributed architectures and computational biology Fun with Algorithms Evangelos Kranakis,DANNY KRIZANC,Flaminia Luccio,2012-05-31 This book constitutes the refereed proceedings of the 6th International Conference FUN 2012 held in June 2012 in Venice Italy The 34 revised full papers were carefully reviewed and selected from 56 submissions They feature a large variety of topics in the field of the use design and analysis of algorithms and data structures focusing on results that provide amusing witty but nonetheless original and scientifically profound contributions to the area

Fault-Tolerant Search Algorithms Ferdinando Cicalese,2013-11-29 Why a book on fault tolerant search algorithms Searching is one of the fundamental problems in computer science Time and again algorithmic and combinatorial issues originally studied in the context of search find application in the most diverse areas of computer science and discrete mathematics On the other hand fault tolerance is a necessary ingredient of computing Due to their inherent complexity information systems are naturally prone to errors which may appear at any level as imprecisions in the data bugs in the software or transient or permanent hardware failures This book provides a concise rigorous and up to date account of different approaches to fault tolerance in the context of algorithmic search theory Thanks to their basic structure search problems offer insights into how fault tolerant techniques may be applied in various scenarios In the first part of the book a paradigmatic model for fault tolerant search is presented the Ulam R nyi problem Following a didactic approach the author takes the reader on a tour of Ulam R nyi problem variants of increasing complexity In the context of this basic model fundamental combinatorial and algorithmic issues in the design of fault tolerant search procedures are discussed The algorithmic efficiency achievable is analyzed with respect to the statistical nature of the error sources and the amount of information on which the search algorithm bases its decisions In the second part of the book more general models of faults and fault tolerance are considered Special attention is given to the application of fault tolerant search procedures to specific problems in distributed computing bioinformatics and computational learning This book will be of special value to researchers from the areas of combinatorial search and fault tolerant computation but also to researchers in learning and coding theory databases and artificial intelligence Only basic training in discrete mathematics is assumed Parts of the book can be used as the basis for specialized graduate courses on combinatorial search or as supporting material for a graduate or undergraduate course on error correcting codes **Forthcoming Books** Rose Arny,2001 **Algebra, combinatorics and logic in computer science** János Demetrovics, *Algebra Combinatorics and Logic in Computer Science* Arto Salomaa,Gyula Katona,J.
