Comprehensive Virology: Descriptive Catalogue of Viruses H. Fraenkel-Conrat, 2012-12-06 The time seems ripe for a critical compendium of that segment of the biological universe we call viruses Virology as a science having only recently passed through its descriptive phase of naming and numbering has probably reached that stage at which relatively few new truly new viruses will be discovered Triggered by the intellectual probes and techniques of molecular biology genetics biochemical cytology and high resolution microscopy and spectroscopy the field has experienced a genuine information explosion Few serious attempts have so far been made to chronicle these events This comprehensive series which will comprise some 6000 pages in a total of about 22 volumes represents a commitment by a large group of active investigators to analyze digest and expostulate on the great mass of data relating to viruses much of which is now amorphous and disjointed

and scattered throughout a wide literature In this way we hope to place the entire field in perspective as well as to develop an invaluable reference and sourcebook for researchers and students at all levels This series is designed as a continuum that can be entered anywhere but which also provides a logical progression of developing facts and integrated concepts

Potyvirus Taxonomy Ortus W. Barnett, 2012-12-06 A number of economically important diseases are caused by potyviruses the largest group of plant viruses Many of these diseases are distributed worldwide The development of effective control strategies against viruses is dependent on the availability of reliable methods of identification and detection To date this has not seemed possible for the potyvirus group because of its size complexity and immense variation This book brings together the collaborative efforts of experts in the field It summarizes characteristics of potyviruses which relate to their taxonomy and points to areas which require consideration before an international consensus can be reached Main topics dealt with in detail are serological relationships nucleic acid sequence information biological properties and specific problems with several virus subgroups or pairs of viruses

Diseases of Horticultural Crops, 1999 The book covers around 700 species covering Latin family common and local names distribution market rate chemical constituents Sketches facilitates identity and comprehension by the reader

CRC Handbook of Viruses Infecting Legumes John R. Edwardson, 2018-01-18 This interesting handbook discusses 145 plant viruses in 27 groups and 31 unclassified viruses in naturally infected legumes The viruses were observed in field infections of 281 species in 64 genera of the Leguminosae The book presents information regarding resistance sources and resistance breeding vectors seed transmission and host ranges Measurements of virus properties are organized in tabular form for particle dimensions serological relationships nucleic acid percentages sedimentation coefficients of particles and nucleic acids molecular weights of nucleic acids and coat proteins optical density and buoyant density Handbook of Viruses Infecting Legumes is unique in that it relates inclusion cytology to plant virus detection identification and classification Light and electron micrographs illustrate morphology location and staining reactions of inclusions Of the 27 groups that contain viruses infecting legumes in nature inclusions are diagnostic at the group level in 15 of these groups Plant breeders diagnosticians plant virologists and students of plant virology will find this an indispensable guide to legume viruses
