Binaries As Tracers Of Stellar Formation:

Binaries as Tracers of Stellar Formation Antoine Duquennoy, Michel Mayor, 1992-11-26 More than two thirds of stars belong to multiple stellar systems Binary stars are considered now as one of the best constraints on stellar formation models Not only do binaries keep memory of their birth conditions but their orbit will also be subjected to changes by tidal effects wind accretion and encounters in clusters Certainly the correlation between orbital eccentricity and period is a clue to our understanding of double star history These proceedings aim to disentangle evidence of stellar formation from later physical evolution Each article in this 1992 volume is a paper that was read at a meeting organized to honour Dr Roger Griffin of the University of Cambridge for his pioneer work in galactic astronomy dynamics of clusters and study on binary stars due to his cross correlation technique to determine stellar radial velocities

Binary and Multiple Stars as Tracers of Stellar

Evolution Zdenek Kopal, Jürgen H. Rahe, 2012-12-06 Proceedings of the 69th Colloquium of the International Astronomical Union held in Bamberg F R G August 31 September 3 1981 *The Impact of Binary Stars on Stellar Evolution* Giacomo Beccari, Henri M. J. Boffin, 2019-04-18 Stars are mostly found in binary and multiple systems with at least 50% of all solar like stars having companions this fraction approaches 100% for the most massive stars A large proportion of these systems interact and alter the structure and evolution of their components leading to exotic objects such as Algol variables blue stragglers and other chemically peculiar stars but also to phenomena such as non spherical planetary nebulae supernovae and gamma ray bursts While it is understood that binaries play a critical role in the Initial Mass Function the interactions among binary systems significantly affect the dynamical evolution of stellar clusters and galaxies This interdisciplinary volume presents results from state of the art models and observations aimed at studying the impact of binaries on stellar evolution in resolved and unresolved populations Serving as a bridge between observational and theoretical astronomy it is a comprehensive review for researchers and advanced students of astrophysics

Physics of Star Formation in Galaxies

F. Palla, H. Zinnecker, 2006-07-06 The book begins with a historical introduction Star Formation The Early History that presents new material of interest for students and historians of science This is followed by two long articles on Pre Main Sequence Evolution of Stars and Young Clusters and Observations of Young Stellar Objects These articles on the fascinating problem of star formation from interstellar matter give a thorough overview of present day theories and observations The articles contain material so far unpublished in the astronomical literature The book addresses graduate students and can be used as a textbook for advanced courses in stellar astrophysics

Gravitational N-Body Simulations

Sverre J. Aarseth, 2003-10-23 This book discusses in detail all the relevant numerical methods for the classical N body problem It demonstrates how to develop clear and elegant algorithms for models of gravitational systems and explains the fundamental mathematical tools needed to describe the dynamics of a large number of mutually attractive particles Particular attention is given to the techniques needed to model astrophysical phenomena such as close encounters and the dynamics of black hole

binaries The author reviews relevant work in the field and covers applications to the problems of planetary formation and star cluster dynamics both of Pleiades type and globular clusters Self contained and pedagogical this book is suitable for graduate students and researchers in theoretical physics astronomy and cosmology Infrared Space Interferometry:

Schalinski,2012-12-06 The past year has produced some of the most exciting results in the history of astronomy particularly in the area of planets outside our solar system Only a half year before our meeting in Toledo Spain the first unambiguous detection of planet sized masses orbiting main sequence stars were reported Since that time evidence for a new exo planet has been reported almost at the rate of about once per month Some of these objects are likely to turn out to be very low mass stars but something like half show characteristics Jupiter like mass and near zero orbital eccentricity which appear to be unique to planets Almost at the same time that giant planets were being discovered regularly the two major space agencies ESA and NASA have identified searches for and detailed study of Earth like planets as a major priority for the future In ESA's Horizon 2000 Plus programme an infrared interferometer has been proposed as a possible future Cornerstone mission Similarly scientists in the US produced the Road Map for the Exploration of Neighboring Planetary Systems ExNPS which provided NASA with a long term plan which leads also to an infrared interferometer in space to study hypothetical Earth like worlds beyond our Solar System Such an observatory is designed to search for the thermal emission from a family of planets using interferometric nulling to remove the contaminating light from the central star **The Carbon Star Phenomenon**

Hilditch,2001-03-12 Binary systems of stars are as common as single stars They are of fundamental importance because they allow stellar masses radii and luminosities to be measured directly and explain a host of diverse and energetic phenomena including X ray binaries cataclysmic variables novae symbiotic stars and some types of supernovae This 2001 book was the first to provide a pedagogical and comprehensive introduction to binary stars It combines theory and observations at all wavelengths to develop a unified understanding of binaries of all categories It comprehensively reviews methods for calculating orbits the Roche model ideas about mass exchange and loss methods for analysing light curves the masses and dimensions of different binary systems and imaging the surfaces of stars and accretion structures This book provides a thorough introduction to the subject for advanced undergraduate and graduate students Researchers will also find this to be an authoritative reference **Nuclei in the Cosmos** F Kappeler,K Wisshak,2020-11-25 Nuclei in the Cosmos a volume of conference papers gathers together astronomers astrophysicists and nuclear physicists for a thorough discussion of nucleosynthesis its role in the evolution of the universe and its intriguing possibilities as a diagnostic tool for stellar interiors Nineteen invited papers provide a solid review of nucleosynthesis topics and approximately another 70 papers bring you up
