Lehninger Principles of Biochemistry 4e Marcy Osgood, Karen Ocorr, 2005 This undergraduate textbook describes the structure and function of the major classes of cellular constituents and explains the physical chemical and biological context in which each biomolecule reaction and pathway operates The fourth edition adds a chapter on the regulation of metabolism reflects recent advances and incorporates new experimental methodologies and an expanded and redesigned treatment of reaction mechanisms Annotation 2004 Book News Inc Portland OR booknews com **Marine biomolecules** Antonio

Trincone, Mikhail Kusaykin, Svetlana Ermakova, 2015-10-02 Oceans include the greatest extremes of pressure temperature and light and habitats can range from tropical waters to ocean trenches several kilometers below sea level at high pressure With its 70% of the surface of our planet marine ecosystem still remains largely unexplored understudied and underexploited in comparison with terrestrial ecosystems organisms and bioprocesses The biological adaptation of marine organisms to a wide range of environmental conditions in the specific environment temperature salinity tides pressure radiation light etc has made them an enormous reservoir of interesting biological material for both basic research and biotechnological improvements As a consequence marine ecosystem is valued as a source of enzymes and other biomolecules exhibiting new functions and activities to fulfill human needs Indeed in recent years it has been recognised as an untapped source of novel enzymes and metabolites even though with regard to the assignment of precise biological functions to genes proteins and enzymes it is still considered as the least developed Using metagenomics to recover genetic material directly from environmental samples this biogenetic diversification can be accessed but despite the contributions from metagenomic technologies the new field requires major improvements A few words on the complexity of marine environments should be added here This complexity ranges from symbiotic relationships to biology and chemistry of defence mechanisms and from chemoecology of marine invasions up to the strategies found in prokaryotes to adapt to extreme environments The interdisciplinary study of this complexity will enable researchers to find an arsenal of enzymes and pathways greatly demanded in biotechnological applications As far as marine enzymes are concerned they may carry novel chemical and stereochemical properties thus biocatalytically oriented studies testing of suitable substrates appropriate checking of reaction conditions study of stereochemical asset of catalysis should be performed to appropriately reveal this chemical biodiversity which increases interest for these enzymes Among other biomolecules polysaccharides are the most abundant renewable biomaterial found on land and in oceans Their molecular diversity is very interesting except polysaccharides used traditionally in food and non food industries the structure and the functionality of most of them are unknown and unexplored

Brown seaweeds synthesize unique bioactive polysaccharides laminarans alginic acids and fucoidans A wide range of biological activities anticoagulant antitumor antiviral anti inflammation etc have been attributed to fucoidans and their role with respect to structure activity relationship is still under debate In this Research Topic we wish to centralize and review contributions idea and comments related to the issues above In particular results of enzymatic bioprospecting in gross marine environment will be acknowledged along with research for structural characterization and biological function of biomolecules such as marine polysaccharides and all kind of research related to the complexity of bioprocesses in marine environments Inter and multi disciplinary approach to this field is favoured in this Research Topic and could greatly be facilitated by the web and open access nature as well

Biomolecules in Organic Solvents Armando Gomez-Puyou,1992-01-27 Biomolecules and Organic Solvents discusses the behavior of enzymes and multi enzyme complexes in organic solvents in addition to the problem of water protein interactions and the characteristics of water at interphases It attempts to bridge the gap between the all water and the organic solvents systems from the point of view of enzyme structure and function The mechanism of action of enzymes dispersed in anhydrous organic solvents and the biotechnological perspectives of the field are evaluated and new information regarding the function and characteristics of complex multi enzymatic systems and whole cells in organic solvents are examined New developments regarding the nature of the water pool and interphases of reverse micelles and their enzyme kinetics are also explored The characteristics and properties of enzymes trapped in reverse micelles are discussed throughout the book Biomolecules in Organic Solvents is essential reading for biochemists molecular biologists and others working in related fields
