Artificial Perception And Music Recognition:

Artificial Perception and Music Recognition Andranick S. Tanguiane, 1993-10-20 This monograph presents the author's studies in music recognition aimed at developing a computer system for automatic notation of performed music. The performance of such a system is supposed to be similar to that of speech recognition systems: acoustical data at the input and music scoreprinting at the output. The approach to pattern recognition employed is that of artificial perception based on self-organizing input data in order to segregate patterns before their identification by artificial intelligence methods. The special merit of the approach is that it finds optimal representations of data instead of directly recognizing patterns. **The**

Cognition of Basic Musical Structures David Temperley, 2004-08-20 In this book David Temperley addresses a fundamental question about music cognition: how do we extract basic kinds of musical information such as meter, phrase structure, counterpoint, pitch spelling, harmony, and key from music as we hear it? Taking a computational approach, Temperley develops models for generating these aspects of musical structure. The models he proposes are based on preference rules, which are criteria for evaluating a possible structural analysis of a piece of music. A preference rule system evaluates many possible interpretations and chooses the one that best satisfies the rules. After an introductory chapter, Temperley presents preference rule systems for generating six basic kinds of musical structure: meter, phrase structure, contrapuntal structure, harmony, and key, as well as pitch spelling. The labeling of pitch events with spellings such as A flat or G sharp. He suggests that preference rule systems not only show how musical structures are inferred but also shed light on other aspects of music. He substantiates this claim with discussions of musical ambiguity, retrospective revision, expectation, and music outside the Western canon: rock and traditional African music. He proposes a framework for the description of musical styles based on preference rule systems and explores the relevance of preference rule systems to higher level aspects of music such as musical schemata, narrative and drama, and musical tension. [Signal Processing Methods for Music Transcription](#) Anssi

Klapuri, Manuel Davy, 2007-02-26 *Signal Processing Methods for Music Transcription* is the first book dedicated to uniting research related to signal processing algorithms and models for various aspects of music transcription such as pitch analysis, rhythm analysis, percussion transcription, source separation, instrument recognition, and music structure analysis. Following a clearly structured pattern, each chapter provides a comprehensive review of the existing methods for a certain subtopic while covering the most important state-of-the-art methods in detail. The concrete algorithms and formulas are clearly defined and can be easily implemented and tested. A number of approaches are covered, including, for example, statistical methods, perceptually motivated methods, and unsupervised learning methods. The text is enhanced by a common reference and index.

Robotic Musicianship Gil Weinberg, Mason Bretan, Guy Hoffman, Scott Driscoll, 2020-02-07 This book discusses the principles, methodologies, and challenges of robotic musicianship through an in-depth review of the work conducted at the Georgia Tech Center for Music Technology (GTCMT) where the concept was first developed. Robotic musicianship is a

relatively new research field that focuses on the design and development of intelligent music making machines The motivation behind the field is to develop robots that not only generate music but also collaborate with humans by listening and responding in an expressive and creative manner This combination of human and machine creativity has the potential to surprise and inspire us to play listen compose and think about music in new ways The book provides an in depth view of the robotic platforms designed at the GTCMT Robotic Musicianship Group including the improvisational robotic percussionists Haile and Shimon the personal robotic companion Shimi and a number of wearable robots such as the Robotic Drumming Prosthesis The Third Drumming Arm and the Skywalker Piano Hand The book discusses numerous research studies based on these platforms in the context of five main principles Listen like a Human Play Like a Machine Be Social Watch and Learn and Wear It *Applications of Conceptual Spaces* Frank Zenker,Peter Gärdenfors,2015-04-16 This volume provides an overview of applications of conceptual spaces theory beginning with an introduction to the modeling tool that unifies the chapters The first section explores issues of linguistic semantics including speakers negotiation of meaning Further sections address computational and ontological aspects of constructing conceptual spaces while the final section looks at philosophical applications Domains include artificial intelligence and robotics epistemology and philosophy of science lexical semantics and pragmatics agent based simulation perspectivism framing contrast sensory modalities and music among others This collection provides evidence of the wide application range of this theory of knowledge representation The papers in this volume derive from international experts across different fields including philosophy cognitive science linguistics robotics computer science and geography Each contributor has successfully applied conceptual spaces theory as a modeling tool in their respective areas of expertise Graduates as well as researchers in the areas of epistemology linguistics geometric knowledge representation and the mathematical modeling of cognitive processes should find this book of particular interest

Soft Computing in Acoustics Bozena Kostek,2013-06-29 Applications of some selected soft computing methods to acoustics and sound engineering are presented in this book The aim of this research study is the implementation of soft computing methods to musical signal analysis and to the recognition of musical sounds and phrases Accordingly some methods based on such learning algorithms as neural networks rough sets and fuzzy logic were conceived implemented and tested Additionally the above mentioned methods were applied to the analysis and verification of subjective testing results The last problem discussed within the framework of this book was the problem of fuzzy control of the classical pipe organ instrument The obtained results show that computational intelligence and soft computing may be used for solving some vital problems in both musical and architectural acoustics **Music, Gestalt, and Computing** Marc Leman,1997-09-10 This book presents a coherent state of the art survey on the area of systematic and cognitive musicology which has enjoyed dynamic growth now for many years It is devoted to exploring the relationships between acoustics human information processing and culture as well as to methodological issues raised by the widespread use of computers as a powerful tool for
