Backdrop Of Stars:

Backdrop of Stars Harry Harrison,1968 Before the Pyramids Christopher Knight,Alan Butler,2014-03-04 This page turning study of the Giza pyramids British henges and the megalithic measuring system could completely change the way we view our remote past and origins Robert G Bauval author of The Orion Mystery The suggestion that the Giza pyramids were laid out to represent the stars of Orion s belt with the position of the River Nile reflecting the Milky Way was first put forward by the renowned author Robert Bauval in his bestselling book The Orion Mystery In Before the Pyramids Christopher Knight and Alan Butler reveal that the British henges were arranged in the same formation but much earlier They also present irrefutable evidence that the astronomical calculations determining the layout of the pyramids could only have been made from the site of the henges in North Yorkshire From this they can conclude that the pyramids of the pharaohs were conceived and planned in Britain Their next stunning discovery takes us to modern times They have found evidence that the whole Megalithic measuring system has survived into the 20th century There are examples in Washington DC even in the positioning and construction of the Pentagon which was only commenced in 1942 and is an exact copy of the dimensions of Stonehenge dating to 3 000 BC **Between the Rocks and the Stars** Stephen Daubert,2021-04-30 Nautilus Book Awards

Principe, 2011-04-28 The sixteenth and seventeenth centuries witnessed such fervent investigations of the natural world that the period has been called the Scientific Revolution. New ideas and discoveries not only redefined what human beings believed, knew, and could do but also forced them to redefine themselves with respect to the strange new worlds revealed by ships and scalpels, telescopes and microscopes, experimentation and contemplation. Driven by religious devotion, by practical need, by the promise of fame and profit, or by the simple desire to know, a broad range of thinkers and workers explored and reconceptualized the world around them. Explanatory systems were made, discarded, and remade by some of the best known names in the entire history of science: Copernicus, Galileo, Newton, and by many others less recognized but no less important. In this Very Short Introduction, Lawrence M. Principe explores the exciting developments in the sciences of the stars: astronomy, astrology, and cosmology; the sciences of earth: geography, geology, hydraulics, pneumatics; the sciences of matter and motion: alchemy, chemistry, kinematics, physics; the sciences of life: medicine, anatomy, biology, zoology, and much more. The story is told from the perspective of the historical characters themselves, emphasizing their background, context, reasoning, and motivations, and dispelling well-worn myths about the history of science.

ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.
