40 **Handbook of Pathogens and Diseases in Cephalopods** Camino Gestal, Santiago Pascual, Ángel Guerra, Graziano

Fiorito, Juan M. Vieites, 2019-03-07 The aim of this open access book is to facilitate the identification and description of the different organs as well as pathogens and diseases affecting the most representative species of cephalopods focussed on *Sepia officinalis* *Loligo vulgaris* and *Octopus vulgaris*. These species are valuable morphotype models and belong to the taxonomic groups Sepioidea, Myopsida and Octopoda which include most of the species with a high market value and aquaculture potential. The study is based on photographs at macroscopic and histological level in order to illustrate the role of the most important pathogens and related diseases from the view of a pathological diagnosis. The reader is able to familiarize with functional anatomy, necropsy and general histology of adults and paralarvae as well as with the identification of different pathogens and pathologies. This work is thus an invaluable guide for the diagnosis of cephalopod diseases. Besides including pathogens for non-European cephalopod species, it also provides a useful contribution encouraging marine pathologists, parasitologists, veterinarians and those involved in fishery sanitary assessments, aquarium maintenance and aquaculture practices aiming to increase their knowledge about the pathology of cephalopods. Carp David Hoole, Dieter Steinhagen, Verena Jung-Schroers, Mikolaj Adamek, 2025-04-09 The prominence of the carp group of fish is widely recognised in three important economic areas: food production, recreation and the ornamental market. Carp species thus represent over 50% of world fish production and are vital to the economic stability of several countries and global regions. It is therefore crucial that the health of these cultured aquatic species is properly considered and maintained to ensure the sustainability of production and recent disease epidemics, for example grass carp reovirus infections in China and koi herpesvirus disease in Asia and Europe, have caused widespread and devastating effects on the aquaculture industries. This book thus examines how the diseases of carp species can be properly identified, monitored, treated and prevented. It specialises on the most prominent globally occurring carp species such as *Cyprinus carpio* (common carp), the *Carassius* species and the carp species that predominate in Europe and Asia such as *Ctenopharyngodon idellus* (grass carp), *Hypophthalmichthys molitrix* (silver carp) and *Hypophthalmichthys nobilis* (bighead carp). It also looks at the more specialised production of certain species, for example *Catla catla* (Catla) and *Labeo rohita* (Rohi) in the Indian subcontinent. This user-friendly book presents a practical approach to disease diagnosis and treatment that covers both infectious and non-infectious diseases. *Fish Disease* Edward J. Noga, 2011-11-16 *Fish Disease: Diagnosis and Treatment*, Second Edition, provides thorough yet concise descriptions of viral, bacterial, fungal, parasitic and non-infectious diseases in an exhaustive number of fish species. Now in full color with over 500 images, the book is designed as a comprehensive guide to the identification and treatment of both common and rare problems encountered during the clinical work-up. Diseases are discussed following a systems-based approach to ensure a user-friendly and practical manual for identifying problems. *Fish Disease: Diagnosis and Treatment*, Second Edition, is the must-have reference for any aquaculturists, aquatic biologists or fish health specialists dealing with diagnosing or treating fish diseases.
