Abcl An Object Oriented Concurrent System Computer Systems Series:

ABCL Akinori Yonezawa,1990 This book provides an overview of the new paradigm through the programming language

ABCL Object-Based Concurrent Computing Mario Tokoro,Oscar Nierstrasz,Peter Wegner,1992-06-16 The ECOOP 91 Workshop on Object Based Concurrent Computing was organized to provide a forum on concurrent distributed and open ended computing The emphasis was on conceptual theoretical and formal aspects as well as practical aspects and sound experience since such a viewpoint was deemed indispensable to investigate and establish a basis for future development This volume contains 12 papers selected from 25 presented at the workshop together with a paper by J A Goguen who was an invited speaker at the workshop The papers are classified into four categories Formal methods 1 three papers are concerned with the formal semantics of concurrent objects based on process calculi Formal methods 2 four papers are concerned with various formal approaches to the semantics of concurrent programs Concurrent programming three papers Models three papers are concerned with models for concurrent systems

Objects for Concurrent Constraint Programming Martin Henz,2012-12-06 Concurrent constraint programming ccp is a recent development in programming language design Its central contribution is the notion of partial information provided by a shared constraint store This constraint store serves as a communication medium between concurrent threads of control and as a vehicle for their synchronization Objects for Concurrent Constraint Programming analyzes the possibility of supporting object oriented programming in ccp Starting from established approaches the book covers various object models and discusses their properties Small Oz a sublanguage of the ccp language Oz is used as a model language for this analysis This book presents a general purpose object system for Small Oz and describes its implementation and expressivity for concurrent computation Objects for Concurrent Constraint Programming is written for programming language researchers with an interest in programming language aspects of concurrency object oriented programming or constraint programming Programming language implementors will benefit from the rigorous treatment of the efficient implementation of Small Oz Oz programmers will get a first hand view of the design decisions that lie behind the Oz object system

Concurrent Objects and Beyond Gul Agha,Atsushi Igarashi,Naoki Kobayashi,Hidehiko Masuhara,Satoshi Matsuoka,Etsuya Shibayama,Kenjiro Taura,2014-09-09 This Festschrift volume includes a collection of papers written in honor of the accomplishments of Professor Yonezawa on the occasion of his 65th birthday in 2012 With a few exceptions the papers in this Festschrift were presented at an international symposium celebrating this occasion Also included are reprints of two of Professor Yonezawa's most influential papers on the programming language ABCL The volume is a testament to the strong and lasting impact Professor Yonezawa's research accomplishments as well as the inspiration he has been to colleagues and students alike

Advanced Information Systems Engineering Panos Constantopoulos,John Mylopoulos,1996-05-03 This book presents the refereed proceedings of the 8th International Conference on Advanced Information Systems Engineering CAiSE 96 held in Herakleion Crete Greece in May

1996 The 30 revised full papers included in the book were selected from a total of some 100 submissions The book is organised in sections on CASE environments temporal and active database technologies experience reports interoperability in information systems formal methods in system development novel architectures workflow management and distributed information systems information modelling object oriented database design and semantic links and abstraction

Conceptual Modeling Peter P. Chen,Jacky Akoka,Hannu Kangassalu,Bernhard Thalheim,2003-05-21 This volume contains a collection of selected papers presented at the Symposium on Conceptual Modeling which was held in Los Angeles California on December 2 th 1997 immediately before the 16 International Conference on Conceptual Modeling ER 97 which was held at UCLA A total of eighteen papers were selected for inclusion in this volume These papers are written by experts in the conceptual modeling area and represent the most current thinking of these experts This volume also contains the summaries of three workshops that were held on 6 7 December 1997 immediately after the ER 97 conference at UCLA The topics of these three workshops are Behavioral Modeling Conceptual Modeling in Multimedia Information Seeking What Is the Role of Cognition in Conceptual Modeling Since these topics are not only very important but also very timely we think it is appropriate to include the summary of these three workshops in this volume Those readers interested in further investigating topics related to the three workshops can either look up the individual paper published on the Web or contact the authors directly The summary paper by Chen at the beginning of this volume also includes the summary of several interesting speeches at the Symposium

Euro-Par' 99 Parallel Processing Patrick Amestoy,Philippe Berger,Michel Daydé,Iain Duff,Valerie Fraysse,Luc Giraud,Daniel Ruiz,1999-08-20 Euro

Parisaninternationalconferencededicatedtothepromotionandadvan ment of all aspects of parallel computing The major themes can be divided into the broad categories of hardware software algorithms and applications for p allel computing The objective of Euro Par is to provide a forum within which to promote the development of parallel computing both as an industrial te nique and an academic discipline extending the frontier of both the state of the art and the state of the practice This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take up The main audience for and participants in Euro Parareseenasresearchersinacademicdepartments governmentlabora ries and industrial organisations Euro Par s objective is to become the primary choice of such professionals for the presentation of new results in their specic areas Euro Par is also interested in applications which demonstrate the e tiveness of the main Euro Par themes There is now a permanent Web site for the series <http://brahms.fmi.uni-passau.de/cleuropar> where the history of the conference is described Euro Par is now sponsored by the Association of Computer Machinery and the International Federation of Information Processing Euro Par 99 The format of Euro Par 99follows that of the past four conferences and consists of a number of topics eachindividually monitored by a committee of four There were originally 23 topics for this year s conference The call for papers attracted 343

submissions of which 188 were accepted Of the papers accepted 4 were judged as distinguished 111 as regular and 73 as short papers *ECOOP '91 European Conference on Object-Oriented Programming* Pierre America,1991-07-03 ECOOP 91 is the fifth annual European Conference on Object Oriented Programming From their beginning the ECOOP conferences have been very successful as a forum of high scientific quality where the newest developments connected to object oriented programming and related areas could be presented and discussed Over the last few years object oriented technology has gained widespread use and considerable popularity In parallel with this the field has matured scientifically but there is still a lot of room for new ideas and for hot debates over fundamental issues as these proceedings show The 22 papers in this volume were selected by the programme committee from 129 submissions Important issues discussed in the contributions are language design specification databases concurrency types and software development

Object-Based Models and Languages for Concurrent Systems Paolo Ciancarini,Oscar Nierstrasz,Akinori Yonezawa,1995-06-20 This volume presents carefully refereed versions of the best papers presented at the Workshop on Models and Languages for Coordination of Parallelism and Distribution held during ECOOP 94 in Bologna Italy in July 1994 Recently a new class of models and languages for distributed and parallel programming has evolved all these models share a few basic concepts simple features for data description and a small number of mechanisms for coordinating the work of agents in a distributed setting This volume demonstrates that integrating such features with those known from concurrent object oriented programming is very promising with regard to language support for distribution and software composition

Languages, Compilers and Run-Time Systems for Scalable Computers Boleslaw K. Szymanski,Balaram Sinharoy,2012-12-06 *Language Compilers and Run time Systems for Scalable Computers* contains 20 articles based on presentations given at the third workshop of the same title and 13 extended abstracts from the poster session Starting with new developments in classical problems of parallel compiler design such as dependence analysis and an exploration of loop parallelism the book goes on to address the issues of compiler strategy for specific architectures and programming environments Several chapters investigate support for multi threading object orientation irregular computation locality enhancement and communication optimization Issues of the interface between language and operating system support are also discussed Finally the load balance issues are discussed in different contexts including sparse matrix computation and iteratively balanced adaptive solvers for partial differential equations Some additional topics are also discussed in the extended abstracts Each chapter provides a bibliography of relevant papers and the book can thus be used as a reference to the most up to date research in parallel software engineering
