African Rain Forest Ecology And Conservation:

African Rain Forest Ecology and Conservation William Weber, Lee J. T. White, Lisa Naughton-Treves, Amy Vedder, 2001-01-01 Extending from west Africa to Madagascar from the vast lowland Congo Basin to the archipelago of forest islands on its eastern rim the African rain forest is surpassed in size only by the Amazon This book sheds light on the current efforts to understand and conserve the African rain forest an area in need of urgent action to save its biological wealth cultural heritage and economic potential Written by conservation scientists and practitioners based in the African rain forest the book offers a multidisciplinary perspective that integrates many biological and social sciences Early chapters trace the forces from paleoecological factors to recent human actions that have shaped the African forest environment The next chapters discuss the dominant biological patterns of species ranging from the distinctive elephants gorillas and okapi to the less well known birds butterflies and amphibians Other chapters focus on how such different groups as hunter gatherers forest farmers bushmeat hunters recent immigrants and commercial foresters have used the forests Several authors stress the need for tighter links between research and conservation action The final section draws lessons from the collective experience of those working in an Africa wracked by political strife and economic hardship

Ecology of an African Rain Forest Thomas T. Struhsaker, 1999-02-01 A unique book that is likely to become a benchmark for those who wish to save the rain forests through sustainable logging practices Its uniqueness lies in the author's collection of long term data up to 25 years on both plants and animals in the same site the Kibale forest in Uganda Very highly recommended for libraries specializing in ecology environmental science forestry and rain forests Choice A much needed volume that will be of interest to a wide audience written by a leader in the field and one with an international reputation The current rosy advocacy for sustainable development needs a wake up call and this is it This volume combines some of the hottest topics in conservation science today into a cohesive whole that looks clear eyed into the face of modern conservation in the tropics and finds it frighteningly lacking in scientific underpinning rational consideration and effective implementation Truman Young University of California at Davis Thomas Struhsaker summarizes 20 years of research in the Kibale forest in Uganda one of the most important centers for the study of tropical rain forests in Africa Among the longest ongoing projects in rain forest ecology anywhere Struhsaker's differs from the great majority of logging studies by emphasizing the fauna rather than looking only at the commercially valuable timber species By providing long term data on a variety of plants and animals it offers the first truly in depth synthesis of the consequences of selective logging in the tropics The main body of the book demonstrates the adverse effects of logging as many as 25 years after the event on community structure and numerous other aspects of forest ecology Although much has been claimed for the possibilities of sustainable logging in tropical rain forests few data support these claims Struhsaker demonstrates that future logging must be done at far lower intensities than is currently practiced if intact ecosystems are to be maintained He also offers detailed recommendations for harvest plans compatible with the

conservation of biodiversity and ecological integrity The long term data summarized here on the population dynamics of rain forest trees primates rodents duikers and elephants are unrivaled and will be widely cited as will the data on seasonality tree phenology gap dynamics rainfall and temperature Struhsaker addresses the underlying causes of tropical deforestation and concludes that although there are numerous proximate factors the ultimate causes are rapidly increasing human populations and rates of consumption per capita He draws comparisons with relevant studies elsewhere in the tropics and offers specific recommendations to address the problems Thomas T Struhsaker has conducted field research in Africa over a period of 34 years From 1970 through 1987 he established developed and directed the field research station in Kibale Uganda He maintains an active role in Kibale today and is a research scientist in the Department of Biological Anthropology and Anatomy at Duke University His publications include The Red Colobus Monkey 1975 and more than 80 scientific and popular articles and technical reports on ecology conservation and animal behavior

The Rainforests of West Africa

MARTIN,2013-11-11 Nowhere else in the world did industrialized countries leave such early marks in the rainforest as in West Africa Past and present developments here are in one way or the other significant for rainforests on other continents as well West Africa is a pioneer in both a good and a bad sense This is reason enough to take a closer look at the history of moist tropical West Africa Until recently no one really seemed to be interested in the rainforests except for a few specialists The world's scientific community neglected to study the incalculable riches of tropical forests to make the public aware of them and their due importance Although interdisciplinary research has been a popular topic for some decades now it was not applied to just the most complex habitat on earth Scientists from all fields studied only that which was easiest to record seemingly blind to a myriad of details awaiting closer examination Botanists went about establishing their herbariums and paid much too little attention to the vegetation as a whole or to the significance of useful plants for local populations Zoologists too busied themselves with collecting and describing species Anthropologists on the other hand tended to overlook faunal details in their ignorance of the animal world they wrote of tigers and deer in Africa And finally foresters saw neither the forest nor the trees for the timber and even confused rainforests with monocultures of fir trees

Reintroduction of Top-Order Predators

Matt W. Hayward,Michael Somers,2009-04-13 Large predators are among the most threatened species on the planet and ways of conserving them in the face of increasing human populations and associated resource requirements are becoming critical This book draws upon the experiences of some of the world's foremost large carnivore specialists to discuss the numerous issues associated reintroducing large predators back into their natural habitats Reviews of internationally renowned reintroduction programs for wolves European lynx and African wild dog reveal the successes and failures of these actions Experts on tigers snow leopards and jaguars contend that there are other conservation options of higher priority that will ensure their security in the long term Other experts discuss more theoretical aspects such as whether we know enough about these species to be able to predict their behavioural or ecological response to the

reintroduction process Social economic political and genetic considerations are also addressed *Ecology of Angola* Brian John Huntley,2023-03-07 This open access book richly illustrates the first and comprehensive account of the country s biomes and ecoregions the driving forces that account for their diversity and vulnerability and the ecological principles that provide an understanding of the patterns and processes that have shaped landscapes ecoregions and ecosystems Angola encompasses the greatest diversity of terrestrial biomes and is the second richest in terms of ecoregions of any African country Yet its biodiversity and the structure and functioning of its ecosystems are largely undocumented The author draws on personal field observations from over 50 years of involvement in ecological and conservation studies in Angola and across Southern Africa The vast recent literature published by researchers in neighboring better resourced countries provides depth to the accounts of ecological principles and processes relevant to Angola and thus contributing to the understanding and sustainable management of its natural resources *The Congo's Salonga National Park* Bila-Isia Inogwabini,2025-10-30

This book examines interactions between human communities and the global biodiversity that is sheltered by the Salonga National Park While not being a review of research that has been on going in the Salonga National Park over several years now the book takes a bird eye perspective to look at how the forests waters and species that occur in the wider Salonga landscape interact to give birth to what the Salonga National Park is As such the book treats of the Salonga s wildlife its forests and waters and the Salonga National Park s contemporary human history within the regional framework

Biodiversity of West African Forests Lourens Poorter,2004 The rain forests of West Africa have been designated as one of the world s hotspots of biodiversity This book focuses on the biodiversity and ecology of these forests It analyses the factors that give rise to biodiversity and the structure of tropical plant communities It includes an atlas with ecological profiles of 280 rare plant species and 56 large timber species each with a one page entry including a colour photograph and distribution map *The Guenons: Diversity and Adaptation in African Monkeys* Mary E. Glenn,Marina Cords,2006-04-11 It has been

twelve years since a work relating to the long tailed African monkeys known as the guenons has been published and fifteen years have passed since the last major scientific symposium was held that was solely dedicated to current research on members of this monkey group living in the wild Since that time new guenon species and subspecies have been discovered previously unstudied guenon species have become the subject of long term research projects and knowledge of the more well known guenon species has greatly increased This volume presents novel information and keen insight on research previously studied and newly discovered A wide range of topics related to guenon biology is presented including evolution taxonomy biogeography reproductive physiology social and positional behavior ecology and conservation Composed of 26 chapters compiled by 47 authors many of whom are young investigators in their field *The Guenons Diversity and Adaptation in African Monkeys* provides a valuable resource for researchers and scientists in the fields of anthropology primatology zoology and conservation biology *Tropical Rain Forests* Richard T. Corlett,Richard B. Primack,2011-03-03 The first edition of Tropical

Rain Forests an Ecological and Biogeographical Comparison exploded the myth of the rain forest as a single uniform entity In reality the major tropical rain forest regions in tropical America Africa Southeast Asia Madagascar and New Guinea have as many differences as similarities as a result of their isolation from each other during the evolution of their floras and faunas This new edition reinforces this message with new examples from recent and on going research After an introduction to the environments and geological histories of the major rain forest regions subsequent chapters focus on plants primates carnivores and plant eaters birds fruit bats and gliding animals and insects with an emphasis on the ecological and biogeographical differences between regions This is followed by a new chapter on the unique tropical rain forests of oceanic islands The final chapter which has been completely rewritten deals with the impacts of people on tropical rain forests and discusses possible conservation strategies that take into account the differences highlighted in the previous chapters This exciting and very readable book illustrated throughout with color photographs will be invaluable reading for undergraduate students in a wide range of courses as well as an authoritative reference for graduate and professional ecologists conservationists and interested amateurs

Governance, Natural Resources and Post-Conflict Peacebuilding Carl Bruch,Carroll Muffett,Sandra Nichols,2016-04-07 When the guns are silenced those who have survived armed conflict need food water shelter the means to earn a living and the promise of safety and a return to civil order Meeting these needs while sustaining peace requires more than simply having governmental structures in place it requires good governance Natural resources are essential to sustaining people and peace in post conflict countries but governance failures often jeopardize such efforts This book examines the theory practice and often surprising realities of post conflict governance natural resource management and peacebuilding in fifty conflict affected countries and territories It includes thirty nine chapters written by more than seventy researchers diplomats military personnel and practitioners from governmental intergovernmental and nongovernmental organizations The book highlights the mutually reinforcing relationship between natural resource management and good governance Natural resource management is crucial to rebuilding governance and the rule of law combating corruption improving transparency and accountability engaging disenfranchised populations and building confidence after conflict At the same time good governance is essential for ensuring that natural resource management can meet immediate needs for post conflict stability and development while simultaneously laying the foundation for a sustainable peace Drawing on analyses of the close relationship between governance and natural resource management the book explores lessons from past conflicts and ongoing reconstruction efforts illustrates how those lessons may be applied to the formulation and implementation of more effective governance initiatives and presents an emerging theoretical and practical framework for policy makers researchers practitioners and students Governance Natural Resources and Post Conflict Peacebuilding is part of a global initiative to identify and analyze lessons in post conflict peacebuilding and natural resource management The project has generated six books of case studies and analyses with contributions from
