Power, Control, and Influence in Sibling

Relationships across Development Nicole Campione-Barr,2017-06-12 Take a close look at sibling relationships particularly

how siblings navigate power control and influence and how the relationship affects the development of the individuals involved While such relationships are both complementary and reciprocal they transforms rather dramatically from hierarchical in early and middle childhood to egalitarian by early adulthood This issue to examines the processes and consequences of such dynamic power shifts for our broader understanding of how these relationship dynamics change and develop throughout the life course how such dynamics may be similar or different cross culturally and how they influence the quality of the sibling relationship as well as the well being of youth To do so the authors present research from each developmental period from early childhood through young adulthood as well as cross cultural research in order to further understanding of the developmental and contextual themes that allow for drawing broader conclusions This is the 156th volume in this Jossey Bass series New Directions for Child and Adolescent Development Its mission is to provide scientific and scholarly presentations on cutting edge issues and concepts in this subject area Each volume focuses on a specific new direction or research topic and is edited by experts from that field
