Reproductive Biology of Bats Elizabeth G. Crichton, Philip H. Krutzsch, 2000-06-12 The *Reproductive Biology of Bats* presents the first comprehensive in depth review of the current knowledge and supporting literature concerning the behavior anatomy physiology and reproductive strategies of bats. These mammals which occur world wide and comprise a vast assemblage of species have evolved unique and successful reproductive strategies through varied anatomical and physiological specialization. These are accompanied by individual and or group behavioral interactions usually in response to environmental mechanisms essential to their reproductive success. Is the first book devoted to the reproductive biology of bats. Contains in depth reviews of the literature concerned with bat reproduction. Contributors are widely recognized specialists. Provides a powerful database for future research.

A Bat Man in the Tropics Theodore Fleming, 2003-11-10 The euphoria of discovery is the only motivation many scientists need for studying nature and its secrets. Yet euphoria is rarely expressed in scientific publications. This book a personal account of more than thirty years of fieldwork by one of the world's leading bat biologists wonderfully conveys the thrill of scientific discovery. Theodore Fleming's work to document the lives and ecological importance of plant visiting bats has taken him to the tropical forests of Panama Costa Rica and Australia and to the lush Sonoran Desert of northwest Mexico and Arizona. This book tells the story of his fascinating career and recounts his many adventures in the field. Fleming weaves autobiographical reflections together with information on the natural history and ecology of bats and describes many other animals and plants he has encountered. His book details the stresses and rewards of life in scientific field camps gives portraits of prominent biologists such as Dan Janzen and Peter Raven and traces the development of modern tropical biology. A witness to the destruction and development of many of the forests he has visited throughout his career Fleming makes a passionate plea for the conservation of these wild places.

Ecology of Bats T.H. Kunz, 2013-11-11 Among living vertebrates bats and birds are unique in their ability to fly and it is this common feature that sets them apart ecologically from other groups. Bats are in some ways the nocturnal equivalents of birds having evolved and radiated into a diversity of forms to fill many of the same niches. The evolution of flight and echolocation in bats was undoubtedly a prime mover in the diversification of feeding and roosting habits reproductive strategies and social behaviors.

Bats have successfully colonized almost every continental region on earth except Antarctica as well as many oceanic islands and archipelagos. They comprise the second largest order of mammals next to rodents in number of species and probably exceed all other such groups in overall abundance. Bats exhibit a dietary diversity including insects, fruits, leaves, flowers, nectar, and pollen, fish, other vertebrates, and blood, unparalleled among other living mammals. Their reproductive patterns range from seasonal monestry to polyestry, and mating systems include promiscuity, monogamy, and polygyny. The vast majority of what we know about the ecology of bats is derived from studies of only a few of the approximately 850 species yet in the past two decades studies on bats have escalated to a level where many important empirical patterns and processes have been identified. This knowledge has strengthened our understanding of ecological relationships and encouraged hypothesis testing rather than perpetuated a catalog of miscellaneous observations.

The Zoological Record, 1923 Indexes the world's zoological and animal science literature covering all research from biochemistry to veterinary medicine. The database provides a collection of references from over 4,500 international serial publications plus books, meetings, reviews, and other non-serial literature from over 100 countries. It is the oldest continuing database of animal biology indexing literature published from 1864 to the present. *Zoological Record* has long been recognized as the unofficial register for taxonomy and systematics, but other topics in animal biology are also covered.
