Battery Management Systems Design By Modelling:

Battery Management Systems H.J. Bergveld, W.S. Kruijt, P.H.L. Notten, 2013-03-09 *Battery Management Systems Design by Modelling* describes the design of Battery Management Systems BMS with the aid of simulation methods. The basic tasks of BMS are to ensure optimum use of the energy stored in the battery pack that powers a portable device and to prevent damage inflicted on the battery pack. This becomes increasingly important due to the larger power consumption associated with added features to portable devices on the one hand and the demand for longer run times on the other hand. In addition to explaining the general principles of BMS tasks such as charging algorithms and State of Charge SoC indication methods, the book also covers real life examples of BMS functionality of practical portable devices such as shavers and cellular phones. Simulations offer the advantage over measurements that less time is needed to gain knowledge of a battery's behaviour in interaction with other parts in a portable device under a wide variety of conditions. This knowledge can be used to improve the design of a BMS even before a prototype of the portable device has been built. The battery is the central part of a BMS and good simulation models that can be used to improve the BMS design were previously unavailable. Therefore a large part of the book is devoted to the construction of simulation models for rechargeable batteries. With the aid of several illustrations it is shown that design improvements can indeed be realized with the presented battery models. Examples include an improved charging algorithm that was elaborated in simulations and verified in practice and a new SoC indication system that was developed showing promising results. The contents of *Battery Management Systems Design by Modelling* is based on years of research performed at the Philips Research Laboratories. The combination of basic and detailed descriptions of battery behaviour both in chemical and electrical terms makes this book truly multidisciplinary. It can therefore be read both by people with an electrochemical and an electrical engineering background. *Battery Management Systems* Hendrik Johannes Bergveld, 2001

Battery Management Systems H. J. Bergveld, W. S. Kruijt, P. H. L. Notten, 2014-01-15

Battery Management Systems Valer Pop, Henk Jan Bergveld, Dmitry Danilov, Paul P. L. Regtien, Peter H. L. Notten, 2008-05-28 *Battery Management Systems* Accurate State of Charge Indication for Battery Powered Applications describes the field of State of Charge SoC indication for rechargeable batteries. With the emergence of battery powered devices accurately estimating the battery SoC and even more important the remaining time of use becomes more and more important. An overview of the state of the art of SoC indication methods including available market solutions from leading semiconductor companies e.g. Texas Instruments, Microchip, Maxim is given in the first part of this book. Furthermore a universal SoC indication system that enables 1% or better accuracy under all realistic user conditions is developed. A possible integration with a newly developed ultra fast recharging algorithm is also described. The contents of this book builds further on the contents of the first volume in the Philips Research Book Series *Battery Management Systems Design by Modelling*. Since the subject of battery SoC indication requires a number of disciplines, this book covers all important disciplines starting

from electro chemistry to understand battery behaviour via mathematics to enable modelling of the observed battery behaviour and measurement science to enable accurate measurement of battery variables and assessment of the overall accuracy to electrical engineering to enable an efficient implementation of the developed SoC indication system It will therefore serve as an important source of information for any person working in engineering and involved in battery management
