Biochemistry Of Parasites:

Biochemistry of Parasites Theodor Von Brand, 2013-10-22 Biochemistry of Parasites Second Edition presents the biochemical aspects of parasitology. The topics covered in the book include inorganic substances, carbohydrate relationships of parasites, parasitic metabolism of carbohydrates and transport mechanisms, distribution of lipids in the bodies of parasites and disturbances in the host's protein metabolism during parasitic infections. Parasitologists and biochemists will find the book interesting. *Comparative Biochemistry of Parasites* H Van den Bossche, 2012-12-02 Comparative Biochemistry of Parasites contains the proceedings of an international symposium organized by the Janssen Research Foundation and held at Janssen Pharmaceutica in Belgium on September 1-3, 1971. The symposium reviewed progress in the understanding of the physiology and biochemistry of parasites such as protozoa and helminths. Organized into 34 chapters, this volume begins with an overview of early research on parasite biochemistry before turning to a discussion of antischistosomal drugs and their biochemical effects on parasites. The reader is then introduced to the biochemistry of carbohydrates in nematodes and cestodes, neurotransmitters in trematodes, pharmacological aspects and biochemical effects of tetramisole, the mechanism of action of berenil, diminazene and related compounds, and dihydrofolate reductases in parasitic protozoa and helminths. Other chapters focus on the loss of fatty acid biosynthesis in flatworms, the cytochrome system in Kinetoplastidae, oxidative phosphorylation in *Moniezia* mitochondria, and the role of non-heme iron in cestode respiration. Scientists, particularly physiologists and biochemists, will find this book an invaluable source of information on parasite physiology and biochemistry.

The Biochemistry of Parasites Gerald M. Slutsky, 2014-05-20 The Biochemistry of Parasites documents the proceedings of the Satellite Conference of the 13th Meeting of the Federation of European Biochemical Societies (FEBS) held in Jerusalem, August 1980. The conference presented the opportunity to summarize work done by parasite biochemists and introduce this field to workers in classical biochemistry. The 45 papers in this volume are divided into two sections covering parasite biomembranes and parasite metabolism. The papers in the biomembranes section are further divided into two parts: the parasite membrane (Part I) and adherence of the parasite to host tissues (Part II). Part I is concerned with both classical and novel aspects of membrane structure and function. It includes studies on the membrane of the leishmania, the surface coat of trypanosomes, membrane function and transport across the cell membrane. Part II covers topics such as the adherence of pathogenic microorganisms and the importance of carbohydrates in parasite-host adherence. The papers in the parasite metabolism section focus primarily on three groups of parasites: leishmania, malaria, and helminths. Topics covered include the isolation and characterization of a proteolytic enzyme from *Plasmodium lophurae*, duck malaria; the selection and culture of malaria parasites resistant to aminopterin; and regulation of cyclic AMP metabolism in *Leishmania* promastigotes and amastigotes. *The Biochemistry of Parasites* Federation of European Biochemical Societies. Meeting (13th : 1980 : Jerusalem), 1981. *Biochemistry of Parasitic Helminths* John Barrett, 1981. *Biochemistry of Parasites* Theodor Von
