Bioengineering And The Skin:

Bioengineering and the Skin R. Marks, 2012-12-06 R MARKS Biology has become a numbers game The advantages of being able to grade changes in tissue submit results to statistical analysis and accurately record biological phenomena make measurement essential This is as true for the various disciplines in applied biology as it is for the more esoteric aspects of the subject Regrettably skin biologists until recently had not seized the opportunities that the availability of their tissue of interest afforded and fell behind in the exploration of measurement techniques Probably this resulted in part from the mistaken sentiment that to see is to know It also originated from the complexity of the skin which as a closely interwoven mixture of tissue types makes assessments technically difficult However we are optimistic about the future The International Society for Bioengineering and the Skin was formed in Cardiff in July 1979 in response to the wishes of the delegates who had attended the first International Symposium on the subject in Miami in 1976 and the second in Cardiff 3 years later This volume is the proceedings of the Cardiff meeting We believe that it demonstrates the brave efforts and variety of new ideas that characterise the studies of scientists who realise the importance of blending the physical sciences with skin biology
