Nirajan Dhakal,2017-12-01 Seawater desalination is a rapidly growing coastal industry that is increasingly threatened by algal blooms Depending on the severity of algal blooms desalination systems may be forced to shut down because of clogging and or poor feed water quality To maintain stable operation and provide good feed water quality to seawater reverse osmosis SWRO systems ultrafiltration UF pre treatment is proposed This research focused on assessing the ability of UF and other pre treatment technologies to reduce biofouling in SWRO systems An improved method to measure bacterial regrowth potential BRP was developed and applied at laboratory pilot and full scale to assess the ability of conventional UF 150 kDa and tight UF 10 kDa alone and in combination with a phosphate adsorbent to reduce regrowth potential and delay the onset of biofouling in SWRO The improved bacterial regrowth potential method employs a natural consortium of marine bacteria as inoculum and flow cytometry The limit of detection of the BRP method was lowered to 43 000 12 000 cells mL which is equivalent to 9 3 2 6 g Cglucose L The reduction in bacterial regrowth potential after tight UF 10 kDa was 3 to 4 times higher than with conventional UF 150 kDa It was further reduced after the application of a phosphate adsorbent independent of pore size of the UF membrane Pilot studies demonstrated that the application of tight UF 10 kDa coupled with a phosphate adsorbent consistently lowered the bacterial regrowth potential and no feed channel pressure drop increase was observed in membrane fouling simulators MFS over a period of 21 days The study also showed that non backwashable fouling of UF membranes varied strongly with the type of algal species and the algal organic matter AOM they release The presence of polysaccharide stretching OH and sugar ester groups stretching S O was the main cause of non backwashable fouling In conclusion this study showed that an improved BRP method is suitable for the assessment of SWRO pre treatment systems and it can be a useful tool to develop potential strategies to mitigate biofouling and improve the sustainability of SWRO systems **EPA-600/3** ,1976-08 **Technical Report for Revision of Steam Electric Effluent Limitations Guidelines**

control technology and at the same time provide basic information on the biology of fouling organisms found in the Indian Ocean. The book begins by presenting an overview of research done in India on the marine fouling organisms and wood borers of the Indian Ocean. It then moves through chapters dealing with the succession of fouling communities, chemical cues in larval settlement, epibiosis, methods of fouling prevention, functional morphology, and distribution of foulers in Indian waters. *Controlling Zebra Mussels at Water Treatment Plant Intakes*, 1997. **Practical Manual for the Monitoring and Control of Macrofouling Mollusks in Fresh Water Systems** Renata Claudi, Gerald L.
